The Official Railway Guide ,1881 Lung Inflammation in Health and Disease, Volume II

Yong-Xiao Wang,2021-05-21 Lung diseases are leading causes of death and disability globally with about 65 million people suffering from COPD and 334 million from asthma Each year tens of millions of people develop and can die from lung infections such as pneumonia and TB Systemic inflammation may induce and exacerbate local inflammatory diseases in the lungs and local inflammation can in turn cause systemic inflammation There is increasing evidence of the coexistence of systemic and local inflammation in patients suffering from asthma COPD and other lung diseases and the co morbidity of two or more local inflammatory diseases often occurs For example rheumatoid arthritis frequently occurs together with and promotes the development of pulmonary hypertension This co morbidity significantly impacts quality of life and can result in death for some patients Current treatment options for lung disease are neither always effective nor condition specific there is a desperate need for novel therapeutics in the field Additionally the molecular and physiological significance of most major lung diseases is not well understood which further impedes development of new treatments especially in the case of coexistent lung diseases with other inflammatory diseases Great progress has been made in recent years in many areas of the field particularly in understanding the molecular geneses regulatory mechanisms signalling pathways and cellular processes within lung disease as well as basic and clinical technology drug discovery diagnoses treatment options and predictive prognoses This is the first text to aggregate these developments In two comprehensive volumes experts from all over the world present state of the art advances in the study of lung inflammation in health and disease Contributing authors cover well known as well as emerging topics in basic translational and clinical research with the aim of providing researchers clinicians professionals and students with new perspectives and concepts The editors hope these books will also help to direct future research in lung disease and other inflammatory diseases and result in the development of novel therapeutics

Yang,2012-12-06 The Epstein Barr virus EBV isolated in 1966 continues to draw worldwide attention as an important human pathogen Its importance is largely related to the continuing accumulation of evidence that implicates EBV as an etiological factor for certain types of human cancer More recent investigations on this virus have focused on the identity of the viral genes responsible for the different disease manifestations observed following viral infection It is hoped that by thorough investigation of this virus clues to how cancer develops from a normal cell will surface In addition many of the gene products are now being exploited for the development of new and more sensitive tests for the diagnosis and clinical management of individuals with EBV associated diseases Thus studies on this virus continue to provide new information of importance to our understanding of the malignant process In an effort to attract both basic and clinical scientists to the same meeting for purposes of scientific exchange and fostering a closer interaction between these individuals a series of international symposia was initiated in 1984 The first meeting was held in Loutraki Greece and was attended by approximately 100 participants The second international symposium was held in St Petersburg Florida in 1986 and was attended by approximately twice as many participants as attended the Loutraki meeting
