Sprayed Concrete Lined Tunnels Alun Thomas, 2019-08-20 Sprayed concrete lined SCL tunnels are growing rapidly in popularity due to their versatility The design and construction of both hard rock and soft ground tunnels has been revolutionised by the advent of the SCL method and now the use of permanent sprayed concrete linings has unlocked the true potential of the method to minimise construction costs and times Yet the complex early age behaviour of the sprayed concrete makes the design difficult and requires a robust management system during construction Consequently the great advantages of the method must be balanced against the risks as a few high profile tunnel collapses have illustrated Practising engineers on site in the design office or in client organizations will find this book an excellent introduction It covers all aspects of SCL tunnelling from the constituents of sprayed concrete to detailed design and management during construction Although there is a close interdependence between all the facets of sprayed concrete few engineers have the right breadth of experience and expertise to cover all of them This urgently needs to be transferred to the wider engineering community as SCL tunnels play an increasingly important role in the delivery of the underground infrastructure which modern urban life demands In this second edition beyond a general updating to reflect new developments the sections on permanent sprayed concrete the innovative technology of spray applied waterproofing membranes fibre reinforcement both steel and macrosynthetic and composite lining design have been expanded Sustainability and environmental impact are addressed in a new section

Fibre-reinforced concrete:From design to structural applications FIB - Féd. Int. du Béton,2016 The FRC 2014 Workshop Fibre Reinforced Concrete from Design to Structural Applications was the first ACI fib joint technical event The Workshop held at Polytechnique Montreal Canada on July 24th

and 25th 2014 was attended by 116 participants from 25 countries and 4 continents The first international FRC workshop was held in Bergamo Italy in 2004 At that time the lack of specific building codes and standards was identified as the main inhibitor to the application of this technology in engineering practice Ten years after Bergamo many of the objectives identified at that time have been achieved The use of fibre reinforced concrete FRC for designing structural members in bending and shear has recently been addressed in the fib Model Code 2010 Steel fibre reinforced concrete SFRC has also been used structurally in several building and bridge projects in Europe and North America SFRC has been widely used in segmental tunnel linings all over the world Members of ACI544 and fib TG 4.1 have been involved in writing code based specifications for the design of FRC structural members More than fifty papers were presented at the Workshop from which forty four were selected for this joint ACI fib publication The papers are organised in the document under six themes Design guidelines and specifications Material properties for design Behaviour and design of beams and columns Behaviour and design of slabs and other structures Behaviour and design of foundations and underground components and finally Applications in structure and underground construction projects
