Artificial Intelligence For High Energy Physics Paolo Calafiura, David Rousseau, Kazuhiro Terao, 2022-01-05 The Higgs boson discovery at the Large Hadron Collider in 2012 relied on boosted decision trees Since then high energy physics HEP has applied modern machine learning ML techniques to all stages of the data analysis pipeline from raw data processing to statistical analysis The unique requirements of HEP data analysis the availability of high quality simulators the complexity of the data structures which rarely are image like the control of uncertainties expected from scientific measurements and the exabyte scale datasets require the development of HEP specific ML techniques While these developments proceed at full speed along many paths the nineteen reviews in this book offer a self contained pedagogical introduction to ML models real life applications in HEP written by some of the foremost experts in their area

Machine Learning in Materials Science Keith T. Butler, Felipe Oviedo, Pieremanuele Canepa, 2022-06-16 Machine Learning for Materials Science provides the fundamentals and useful insight into where Machine Learning ML will have the greatest impact for the materials science researcher This digital primer provides example methods for ML applied to experiments and simulations including the early stages of building an ML solution for a materials science problem concentrating on where and how to get data and some of the considerations when choosing an approach The authors demonstrate how to build more robust models how to make sure that your colleagues trust the results and how to use ML to accelerate or augment simulations by introducing methods in which ML can be applied to analyze and process experimental data They also cover how to build integrated closed loop experiments where ML is used to plan the course of a materials optimization experiment and how ML can be utilized in the discovery of materials on computers

Resources in Education ,1990-10 *Advanced Educational Technologies for Mathematics and Science* David L. Ferguson,2013-04-17 This book is the outgrowth of a NATO Advanced Research Workshop held in Milton Keynes United Kingdom in the summer of 1990 The workshop brought together about 30 world leaders in the use of advanced technologies in the teaching of mathematics and science Many of these participants commented that the workshop was one of the more productive and exciting workshops that they had attended It was not uncommon to see participants engaged in informal discussion far into the evenings and early mornings long after formal sessions had ended It is my hope that this book captures the substance and excitement of many of the ideas that were presented at the workshop Indeed the process by which this book has come about has given every opportunity for the best thinking to get reflected here Participants wrote papers prior to the workshop After the workshop participants revised the papers at least once In a few instances three versions of papers were written Some participants could not resist the urge to incorporate descriptions of some of the newer developments in their projects The papers in this book demonstrate how technology is impacting our view of what should be taught what can be taught and how we should go about teaching in the various disciplines As such they offer great insight into the central issues of teaching and learning in a wide range of disciplines and across many grade levels ranging from elementary school through undergraduate college education
