Living Environment

The living things in an area interacting with their physical environment make up an **ecosystem**.

Organisms which can make their own food by photosynthesis are called **autotrophs** or **producers**.

primary consumers are herbivores which eat producers.

secondary consumers are consumers which eat primary consumers.

autotrophs -- organisms able to make its own food (usually using the life process of **photosynthesis**)

heterotrophs -- is an organism which depends upon other organisms for its food

habitat -- is the place an organism lives

niche -- is the role of an organism in the environment, especially its feeding role

** No 2 species can occupy the same ecological **niche**.

As the number of organisms in an ecosystem and their interactions increase, the stability of the ecosystem **increases**.

Organize the four ecological levels of organization from simplest to most complex.

population (one species) → **community** (more than one species in an area) → **ecosystem** (community plus physical factors) → **biosphere** (all parts of world where life is found)

Life Processes

digestion -- breakdown of food to simpler molecules which can enter the cells

circulation -- the movement of materials within an organism or its cells

movement -- (**locomotion**) change in position by a living thing

excretion -- removal of waste products by an organism (wastes may include carbon-dioxide, water, and urea in urine and sweat)
