Chapter 1 Solutions

1.1 Part (c) is false. The predicted value of Y when $X = 2$ is $\hat{Y} = 100 + 15(2) = 130$, not 110. Parts (a), (b), and (d) are true.

1.2 A residual plot does not help assess (c) the condition of independence of the residuals. It does help assess (a) linearity, (b) constant variance, and (d) zero mean.

1.3 The slope is given in the output under the heading Coef for the predictor WingLength. The estimate is $\hat{\beta}_1 = 0.4674$.

1.4 The slope is given in the output under the heading Coef for the predictor Year. The estimate is $\hat{\beta}_1 = 0.01251$.

1.5 The intercept is given in the output under the heading Coef for the Constant. The estimate is $\hat{\beta}_0 = 1.3655$.

1.6 The intercept is given in the output under the heading Coef for the Constant. The estimate is $\hat{\beta}_0 = -16.47$.

1.7 As wing length increases by 1 mm, the weight increases by 0.4674 g, on average.

1.8 As year increases by 1, the length of the winning long jump increases by 0.01251 m, on average.

1.9 The regression standard error is given in the output as $S = 1.39959$. We can also compute this from the information given in the Error row of the Analysis of Variance:

$$s_e = \sqrt{\frac{\text{SSE}}{n-2}} = \sqrt{\frac{223.31}{116-2}} = \sqrt{1.939} = 1.39959$$

A typical deviation of a sparrow weight from the line predicted by its wing length might be about 1.4 grams.

1.10 The regression standard error is given in the output as $S = 0.259522$. We can also compute this from the information given in the Error row of the Analysis of Variance:

$$s_e = \sqrt{\frac{\text{SSE}}{n-2}} = \sqrt{\frac{1.751}{28-2}} = \sqrt{0.06735} = 0.2595$$

Witmer, 2018-11-05 STAT2 introduces students to statistical modeling beyond what they have learned in a Stat 101 college course or an AP Statistics course Building on basic concepts and methods learned in that course STAT2 empowers students to analyze richer datasets that include more variables and address a broader range of research questions Other than a working understanding of exponential and logarithmic functions there are no prerequisites beyond successful completion of their first statistics course To help all students make a smooth transition to this course Chapter 0 reminds students of basic statistical terminology and also uses the familiar two sample t test as a way to illustrate the approach of specifying estimating and testing a statistical model Using STAT2 students will Go beyond their Stat 101 experience by learning to develop and apply models with both quantitative and categorical response variables and with multiple explanatory variables STAT2 Chapters are grouped into units that consider models based on the type of response and type of predictors Discover that the practice of statistical modeling involves applying an interactive process STAT2 employs a four step process in all statistical modeling Choose a form for the model fit the model to the data assess how well the model describes the data and use the model to address the question of interest Learn how to apply their developing judgment about statistical modeling STAT2 introduces the idea of constructing statistical models at the very beginning in a setting that students encountered in their Stat 101 course This modeling focus continues throughout the course as students encounter new and increasingly more complicated scenarios Analyze and draw conclusions from real data which is crucial for preparing students to use statistical modeling in their professional lives STAT2 incorporates real and rich data throughout the text Using real data to address genuine research questions helps motivate students to study statistics The richness stems not only from interesting contexts in a variety of disciplines but also from the multivariable nature of most datasets **STAT 2**
