Newman, 2010-09. Is globalization making our world more equal or less? Proponents of globalization argue that it is helping and that in a competitive world no one can afford to discriminate except on the basis of skills. Opponents counter that globalization does nothing but provide a meritocratic patina on a consistently unequal distribution of opportunity. Yet despite the often deafening volume of the debate, there is surprisingly little empirical work available on the extent to which the process of globalization over the past quarter century has had any effect on discrimination. Tackling this challenge, *Discrimination in an Unequal World* explores the relationship between discrimination and unequal outcomes in the appropriate geographical and historical context. Noting how each society tends to see its particular version of discrimination as universal and obvious, the editors expand their set of cases to include a broad variety of social relations and practices. However, since methods differ and are often designed for particular national circumstances, they set the much more ambitious and practical goal of establishing a base with which different forms of discrimination across the world can be compared. Derived from a broad array of methods, the book draws many important lessons on the new means by which the world creates social hierarchies, the democratization of inequality, and the disappearance of traditional categories. **Universities,**

Inclusive Development and Social Innovation Claes Brundenius, Bo Göransson, José Manoel Carvalho de Mello, 2016-10-25. This book examines the ways in which universities can play a crucial role in inclusive development, social innovation, and social entrepreneurship. It aims to prove the importance of inclusive development and inclusive innovation on economic growth and demonstrate the ways in which universities can be pioneers in this area through initiatives in social responsibility and social innovation. For example, providing access to a university education without discrimination of race, gender, income, status, or other factors would help to diminish the increasing income differentials currently being experienced in many countries, especially in the developing world. The research and studies included in this book provide insight into possible actions that can be taken by universities and public and private shareholders in inclusive development, social innovation, social entrepreneurship, and overall regional economic and social development. Innovation is currently considered to be the most important and dynamic factor explaining growth and development. At the same time, the traditional view considering innovation as having to be commercialized at any price is being challenged. Lately, there has been growing interest in innovation in the public sector, particularly with respect to social innovations designed to reduce income inequality. To address these concepts, constant exchange of ideas and information between research groups became necessary. UniDev, *Universities in Development: the Evolving Role of Academic Institutions in Innovation Systems and Development*, is an international research group with researchers in twelve countries interested in the role of universities in development. This
