

13. Weighing just half an ounce, rock pocket mice could never fight off large predators. Its best hope for survival is ~~camouflage~~. Not surprisingly, its fur matches the color of the Pinacate rocks.
14. DNA is a code, and its ~~double~~ strand contains all the information to make living things grow and develop. Lined along each DNA molecule are special sequences of the code that form our ~~genes~~. Many genes get translated into ~~proteins~~, and these proteins make the stuff of our bodies. One protein makes hair, another makes cartilage; others make muscle.
15. When the ~~human genome project~~ began, in 1990, the scientific world was on tenterhooks. All these billion letters of our DNA were going to be identified, in order.
16. The least understood regions of DNA, the vast stretches that were once known as junk. It has been called the dark matter of the genome: mysterious, uncharted, strange. The vast bulk of the double helix, some ~~98~~ percent of it, doesn't code for ~~proteins~~, which make the stuff of our bodies. The genes which do comprise just ~~two~~ percent.
17. Cornell had found something that is revolutionizing our understanding of how different animal bodies have evolved. A piece of DNA, called a ~~protein~~, switches one not genes. They don't make stuff like hair, cartilage or muscle, but they turn on and off the ~~genes~~ that do.
18. Scientists now realize that not all genes are created equal. Some make the stuff of our ~~bodies~~, and ~~proteins~~ are needed to turn many of these stuff genes on and off. The ~~body-plan~~ genes are what throw these switches, which tell the stuff genes what to do and when. This subtle choreography can have profound effects on how different animal bodies are formed.
19. A flat snout, with ~~agreed~~ staring eyes, the signature of an animal that pushes its head out of the water. And for that, it would have needed something like ~~genes~~.
20. The Hox genes give orders that cascade through a developing embryo, activating entire networks of ~~proteins~~ and ~~genes~~ that make the parts of the body. They are absolutely critical to the shape and form of a developing creature.
21. Many of the genes needed to make legs and arms were already being carried around by prehistoric fish. All it needed was a few ~~mutations~~, a few changes to the timing and order of what was turned off and on, and a fin could become a ~~limb~~.
22. Our new understanding of DNA has led us to these one genes that make the stuff of our bodies, switches that turn them off and on, and still other genes that give those switches orders. Together, in a complex cascade of ~~genes~~ and ~~proteins~~, they combine to produce the amazing ~~diversity~~ of life on this planet.
23. Given all the obvious differences between humans and ~~chimps~~, you might expect our DNA to be really different. But, in fact, it's more like ~~99~~ percent identical.
24. A ~~mutation~~ in our jaw muscle allows the human skull to keep expanding into adulthood, creating a bigger space for our ~~brain~~. And so our most important organ is able to grow.
25. The cortex is that wrinkled outer layer of our brain. It's vital for those defining human capabilities like ~~language~~, music, and ~~mathematics~~. When she looked at that DNA, in chimps and compared it to the same DNA, in a chicken, it was different in just ~~two~~ letters. But in humans it was different by ~~99~~ letters. A massive mutation.

Science Fraud: Darwin's Plagiarism of Patrick Matthew's Theory Mike Sutton, 2023 Patrick Matthew in 1831 originated the complete theory of evolution by natural selection in his book *On Naval Timber and Arboriculture* and did so before Charles Darwin and Alfred Wallace claimed to independently replicate it in 1858 Unjustly and against the Arago convention on priority a ruling that gives origination of any science theory to the first to publish Matthew has been illicitly denied his priority on the grounds he never influenced anyone with his breakthrough Today Big Data research has uncovered Darwin's science fraud by plagiarism revealing evidence which proves beyond all reasonable doubt that he and Alfred Wallace both independently plagiarised the theory of evolution by natural selection from Patrick Matthew Books have been newly unearthed in the publication record to show that at least 30 people cited Matthew's work in published literature before 1858 and that several were known influencers of Darwin's and Wallace's work in the field Additionally several people in Darwin's and Wallace's social circles were first to be second into print using original terms coined by Matthew in his bombshell breakthrough book This book reveals all the newly unearthed data and essentially explains it alongside the deplorable treatment of Patrick Matthew in scholarly historical context Dr Mike Sutton further reveals using social science participatory observation methods and experimental results how members of the so called Darwin Industry enabled and facilitated by the deliberate publication of falsehoods and other grossly misleading editing on Wikipedia have disgracefully worked to re bury these newly unearthed facts by means of knee jerk blind sight ignorant rejection blatant and deliberate fact denial censorship persistent and serious workplace harassment obscene social media abuse poison pen emails lies mischievous misrepresentation and repeat research plagiarism

Human Evolution beyond Biology and Culture Jeroen C. J. M. van den Bergh, 2018-10-18 Both natural and cultural selection played an important role in shaping human evolution Since cultural change can itself be regarded as evolutionary a process of gene culture

coevolution is operative The study of human evolution in past present and future is therefore not restricted to biology An inclusive comprehension of human evolution relies on integrating insights about cultural economic and technological evolution with relevant elements of evolutionary biology In addition proximate causes and effects of cultures need to be added to the picture issues which are at the forefront of social sciences like anthropology economics geography and innovation studies This book highlights discussions on the many topics to which such generalised evolutionary thought has been applied the arts the brain climate change cooking criminality environmental problems futurism gender issues group processes humour industrial dynamics institutions languages medicine music psychology public policy religion sex sociality and sports

The Descent of Love Bert Bender,2015-11-16 Upon its publication in 1871 Charles Darwin s The Descent of Man and Selection in Relation to Sex sent shock waves through the scientific community and the public at large In an original and persuasive study Bert Bender demonstrates that it is this treatise on sexual selection rather than any of Darwin s earlier works on evolution that provoked the most immediate and vigorous response from American fiction writers These authors embraced and incorporated Darwin s theories insights and language creating an increasingly dark and violent view of sexual

love in American realist literature In *The Descent of Love* Bender carefully rereads the works of William Dean Howells Henry James Elizabeth Stuart Phelps Sarah Orne Jewett Kate Chopin Harold Frederic Charles W Chesnutt Edith Wharton and Ernest Hemingway teasing from them a startling but utterly convincing preoccupation with questions of sexual selection Competing for readership as novelists who best grasped the real nature of human love these writers also participated in a heated social debate over racial and sexual differences and the nature of sex itself Influenced more by *The Descent of Man* than by *The Origin of Species* Bender's novelists built upon Darwin's anthropological and zoological materials to anatomize their character's courtship behavior returning consistently to concerns with physical beauty natural dominance and the power to select a mate Bringing the resources of the history of science and intellectual history to this the first full length study of the impact of Darwin's theories in American literature Bender revises accepted views of social Darwinism American literary realism and modernism in American literature forever changing our perceptions of courtship and sexual interaction in American fiction from 1871 to 1926 and beyond
