The USS Intrepid NCC-1701-B was a variant of the Excelsior class, the designed from the original design. In several important respects—most obviously, the warp section was fitted with two additional impulse engines (doubling the total to four). This was a response to the disappearing speeds achieved by the Excelsior's warp when it was separated from the secondary hull. The other major difference involved moving the decks at the bottom of the engineering hull under to provide additional life space and armor capacity.

Designed to include improvements as the test bed for Starfleet's fleet training experiments of the 1980s, the Excelsior class was one of the Federation's most successful starship designs. The fundamental engineering principles behind the class of ships drew heavily on the innovations developed

by Engineering Captain Montgomery Scott during his revolutionary work on the upgrade of the Constitution-class. It became clear to Starfleet that the ideas that were being developed could be further explored in an entirely new class of ship and this led them to start work on the Excelsior. The final design proved incredibly flexible and allowed room for the next century.

Initially the Intrepid-B was a standard Excelsior-class ship. The four D2 decks, with the main bridge on Deck 7, at the top of the warp

section, and Deck 30—where armaments were both generated and stored—at the bottom of the secondary hull.

The warp section provided almost all of the ship's living quarters, with the majority of the officers being located on Deck 8. The main sickbay was on Deck 6, at the distal center of the warp, ensuring that it was one of the safest locations on the ship. In her original arrangement, crew compartments had to share quarters, but this was subsequently reconfigured to provide each crewmember with their living space for deep-space exploration missions. This was considered necessary given the extended periods that the crew had to spend on board ship.

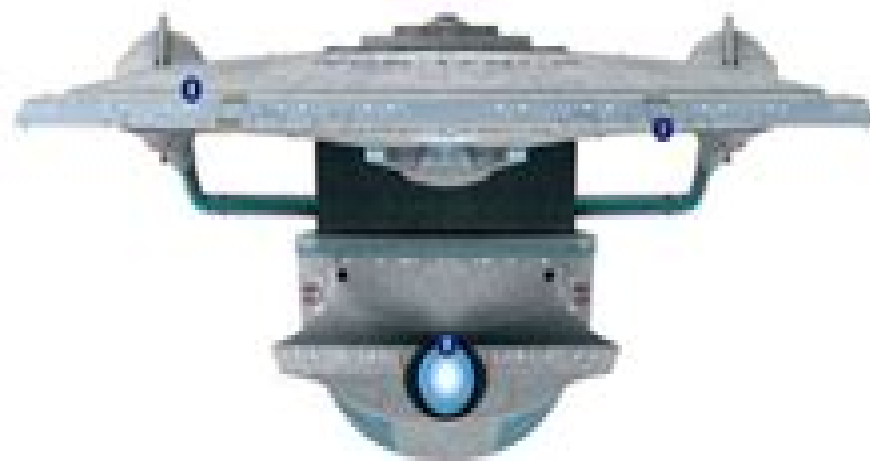

When she launched, the Intrepid-B was one of the fastest and most technologically advanced ships

in the fleet. She was only the 19th Excelsior-class ship to enter service.

In a design refinement carried over from the Excelsior prototype the warp core was positioned

web jul 19 2022 answer laws of refraction refer to answer 74 the speed of light in vacuum $3 \times 10^8 \text{ m/s}$ the speed of light in a medium $1.4 \times 10^8 \text{ m/s}$ absolute refractive index question 82 state the laws of refraction of light if the speed of light in vacuum is $3 \times 10^8 \text{ m/s}$ 1 find the speed of light in a medium of absolute refractive index

refraction and lenses review answers the physics classroom - Jun 13 2023

web answer d bouncing off a boundary choice b is reflection refraction involves passing through a boundary choice a and changing speed choice c however a light ray can exhibit both of these behaviors without undergoing refraction for instance if it approaches the boundary along the normal

refraction questions and answers homework study com - Sep 04 2022

web refraction questions and answers get help with your refraction homework access the answers to hundreds of refraction questions that are explained in a way that s easy for you to

sample problems for snell s law rensselaer polytechnic institute - Nov 06 2022

web sample problem 1 light travels from air into an optical fiber with an index of refraction of 1.44 a in which direction does the light bend b if the angle of incidence on the end of the fiber is 22° what is the angle of refraction inside the fiber c sketch the path of light as it changes media

sample refraction exercises physicslab - Jul 14 2023

web sample refraction exercises directions on this worksheet you will examine several situations dealing with properties of light as it travels through transparent media omit question 1 a beam of light traveling in air has an angle of incidence of 43.0° when it enters a medium which has an index of refraction of 1.33

snell s law questions answers schoolworkhelper - Feb 09 2023

web 1 using snell s law determine the constant when the angle of incidence and the angle of refraction are need help with your writing assignment get online help from vetted experts in any field of study check the price get help a 50 and 30 b 30 and 18 c 60 and 38 2

refraction practice the physics hypertextbook - May 12 2023

web according to the law of reflection the angle of reflection equals the angle of incidence so once again the answer is 53 ray c best represents this direction snell s law is usually written like this $n_1 \sin \theta_1 = n_2 \sin \theta_2$ for this problem
