Stargazing Guide 2013:

A Stargazing Program for Beginners Jamie Carter, 2015-11-20 Sets out a simple month by month program to reveal all of the night sky's biggest and most beautiful secrets in just one year and with only a few hours of stargazing each month. By investing just an hour a week and 50 in binoculars it's possible to learn a few simple techniques and quickly gain a real insight into the night sky's ever-changing patterns and what they tell us about Earth, the seasons, and ourselves. Searching more for a learned appreciation of nature and our exact place within the cosmos than academic scientific knowledge, science and travel writer Jamie Carter takes the reader on a 12-month tour of the night sky's incredible annual rhythms that say so much about Earth. During the journey, he learns about the celestial mechanics at work in the skies above that are to the beginner almost beyond belief. As well as the vital constellations and clusters and the weird and wonderful nebulae, he searches out dark sky destinations across the globe that help increase knowledge and give a new perspective on familiar night sky sights. On the journey, he witnesses a solar eclipse and grapples with star charts, binoculars, smartphone apps, telescopes, spots satellites, and attempts basic astro photography. By year's end, the reader will be able to glance at the night sky from anywhere on the planet and tell what direction he or she is facing, what time it is, where all the planets are, and even where the Galactic Center Point is.

Visual Astronomy Panos Photinos, 2014-04-01 Visual Astronomy introduces the basics of observational astronomy, a fundamentally limitless opportunity to learn about the universe with your unaided eyes or with tools such as binoculars, telescopes, or cameras. The book explains the essentials of time.

Philip's Stargazing 2013 Heather Couper, Nigel Henbest, 2012-10-01 Philip's Stargazing 2013 is a concise guide to the northern night sky, helping starwatchers to see the year's most fascinating events, whether observing with the naked eye, binoculars, or a telescope. The guide is suitable for use between latitudes 40N and 60N, including Britain and Ireland, Europe as far south as Rome, and Canada and the northern USA as far south as Philadelphia. Each chapter, one for each month of the year, has a colour star map created by Wil Tirion showing the positions and phases of the Moon, the positions of the planets, and other useful information. Each month also includes a constellation described in detail, special events during the month such as eclipses, a featured astronomical object, usually a deep sky target, plus an astrophotograph with details of how it was taken. The Solar System Almanac explains the movement of the planets, with particular attention paid to their positions in 2013. Solar and lunar eclipses, meteor showers, and comets are also described. Exploring the Deep Sky provides a list of recommended deep sky objects. The observer can use the monthly charts to discover which constellations are on view and then use this information to plan deep sky observing. The book concludes with an Equipment Review. Here Robin Scagell, author of Philip's Stargazing with a Telescope, provides a round-up of what's new in observing technology, from the latest brands of telescope to the best webcams.
