With Statistics Robert Szafran, 2011-10-20 The book is divided into three Parts Part One has chapters that introduce data analysis and SPSS Part Two contains eight chapters on descriptive statistics that begin with frequency tables and go through multiple regression and Part Three includes six chapters on inferential statistics Part One Getting Started begins by answering some questions most students have right at the start questions like why study data analysis and how much math

and computer knowledge is required Essential concepts from research methods relevant for data analysis are also explained

Part Two Descriptive Statistics Answering Questions about Your Data demonstrates procedures to use when the analyst is only concerned with describing the cases for which he or she actually has data Statistics summarizing single variables univariate statistics are presented first and then statistics summarizing relationships between variables multivariate statistics Frequency tables measures of central tendency measures of dispersion crosstabs measures of association subgroup means and regression are all covered as are bar charts pie charts histograms and clustered bar charts

Part Three Inferential Statistics Answering Questions about Populations explains procedures which allow the analyst to draw conclusions about the population from which his or her sample of cases was randomly selected It begins with a simple chapter on the statistical theory behind inferential statistics A four step approach to hypothesis testing is introduced in the next chapter and demonstrated with one sample t test hypotheses The remaining chapters present different types of hypothesis tests including paired samples independent samples one and two way ANOVA and chi square
