Waterpollution Control Research Series 16060 DDZ 07/71. Study of Reutilization of Wastewater Recycled Through Groundwater United States Environmental Protection Agency, 1971

Study of Reutilization of Wastewater Recycled Through Groundwater Doyle F. Boen, James H. Bunts, Robert J. Currie (Author of Study of reutilization of wastewater recycled through groundwater), 1972 A project to demonstrate the feasibility and safety of recycling water under operating conditions was performed in the Hemet San Jacinto Valley of the State of California Since the Valley is a closed basin and is dependent in part upon imported water it was felt that recycling of the water would ultimately lead to a reduction in the salt input and resultant degradation of the existing underground reservoir The project added considerable knowledge and experience to the technology of intermittent wastewater percolation and associated monitoring techniques A novel feature of the project was the employment of highly sensitive temperature probes to trace the lateral migration of the recharged water much of which appears to be escaping as shallow underflow to the San Jacinto River and hence not reaching the deep groundwater table

Chaotic Behavior in Quantum Systems Giulio Casati, 2012-12-06 Six years ago in June 1977 the first international conference on chaos in classical dynamical systems took place here in Como For the first time physicists mathematicians biologists chemists economists and others got together to discuss the relevance of the recent progress in nonlinear classical dynamics for their own research field Immediately after publication of Nonlinear Science Abstracts started which in turn led to the Physica D Journal and to a rapid increase of the research activity in the whole area with the creation of numerous Nonlinear Centers around the world During these years great progress has been made in understanding the qualitative behavior of classical dynamical systems and now we can appreciate the beautiful complexity and variety of their motion Meanwhile an increasing number of scientists began to wonder whether and how such beautiful structures would persist in quantum motion Indeed mainly integrable systems have been previously considered by Quantum Mechanics and therefore the problem is open how to describe the qualitative behavior of systems whose classical limit is non integrable The present meeting was organized in view of the fact that scientists working in different fields mathematicians theoretical physicists solid state physicists nuclear physicists chemists and others had common problems Moreover we felt that it was necessary to clarify some fundamental questions concerning the logical basis for the discussion including the very definition of chaos in Quantum Mechanics

Fundamental Aspects of Quantum Theory Vittorio Gorini, Alberto Frigerio, 2012-12-06 This book collects the contributions to the NATO Advanced Research Workshop on Fundamental Aspects of Quantum Theory held at the Centro di Cultura Scientifica Alessandro Volta Villa Olma Carro Italy 27 September 1985 The meeting was dedicated to the memory of the late professor Piero Caldirola a prominent member of the Physics Department of the University of Milan and a native of Como The aim of the workshop has been to present several recent experimental results and theoretical developments concerning the various facets of quantum physics The breadth of scope of the meeting

was in accordance with Professor Caldirola's vast scientific interests and fostered communication among experimental physicists, theoretical and mathematical physicists and mathematicians working in different but related fields. Indeed, lecturers endeavoured to make their contributions understandable to people acquainted with the problem but not necessarily familiar with the technical details and these efforts were successful as indicated by the frequent private discussions which took place among participants belonging to different breeds and brands. The meeting was made up of six one-day sessions each of them addressing to a specific aspect of quantum theory: 1 General Problems and Crucial Experiments with emphasis on single particle interference experiments of neutrons and of photons and on the measurement problem; 2 Quantization and Stochastic Processes including stochastic quantization of gauge fields, stochastic description of supersymmetric fields, quantum stochastic calculus and stochastic mechanics.

Atoms in Electromagnetic Fields Claude Cohen-Tannoudji, 1994

This book presents a collection of papers written during the last 33

years by Claude Cohen Tannoudji and his collaborators on various physical effects which can be observed on atoms interacting with electromagnetic fields It consists of a personal selection of review papers lectures given at schools as well as original experimental and theoretical papers Emphasis is put on physical mechanisms and on general approaches such as the dressed atom approach having a wide range of applications Various topics are discussed such as light shifts level crossing resonances multiphoton processes resonance fluorescence in intense laser fields photon correlations quantum jumps radiative corrections laser cooling and trapping This volume includes short introductions by the author Each paper presented in the volume is preceded by a short commentary giving its motivations explaining how it fits with the general evolution of the research field and pointing out connections existing between works done at different periods

Advances In Atomic Physics: An Overview Claude Cohen-tannoudji, David Guery-odelin, 2011-09-02 French Nobel Laureate Claude Cohen Tannoudji is second to none in his understanding of the modern theory and application of atom photon interactions He is also known for his lucid and accessible writing style *Advances in Atomic Physics* is an impressive and wonderful to read reference text Certainly researchers in the fields of atom photon interactions and atom traps will want it as a reference on their bookshelves A selection of chapters may be of benefit to students the early chapters for those entering the field the later chapters for those already doing atom laser PhD thesis work *Physics Today* This book presents a comprehensive overview of the spectacular advances seen in atomic physics during the last 50 years The authors explain how such progress was possible by highlighting connections between developments that occurred at different times They discuss the new perspectives and the new research fields that look promising The emphasis is placed not on detailed calculations but rather on physical ideas Combining both theoretical and experimental considerations the book will be of interest to a wide range of students teachers and researchers in quantum and atomic physics

Atomic and Electron Physics, 1967-01-01 *Atomic and Electron Physics*
A Single Trapped Rydberg Ion Gerard Higgins, 2019-10-22 Systems of trapped ions and systems of ultracold Rydberg atoms are used at the forefront of quantum physics research and they make strong contenders as platforms for quantum technologies Trapped Rydberg ions are a new hybrid technology envisaged to have both the exquisite control of trapped ion systems and the strong interactions of Rydberg atoms In this work a single trapped Rydberg ion is experimentally investigated A trapped strontium ion is excited to Rydberg states using two ultraviolet lasers Effects of the strong trapping electric fields on the highly sensitive Rydberg ion are studied After mitigating unwanted trap effects the ion is coherently excited to Rydberg states and a quantum gate is demonstrated This thesis lays much of the experimental groundwork for research using this novel system

Fizika tverdogo tela, 1989 **Atoms In Electromagnetic Fields (2nd Edition)** Claude Cohen-tannoudji, 2004-11-25 The production quality is very high even the smallest symbols are easily readable and some papers are reproduced in color The clarity of the exposition the wide range of topics and the logic of the presentation make this a valuable teaching reference This book is highly recommended for physicists and students working on atoms in

intense laser fields laser cooling and trapping and Bose Einstein condensation Optics Photonics News This invaluable book presents papers written during the last 40 years by Claude Cohen Tannoudji and his collaborators on various physical effects which can be observed on atoms interacting with electromagnetic fields It consists of a personal selection of review papers lectures given at schools as well as original experimental and theoretical papers Emphasis is placed on physical mechanisms and on general approaches such as the dressed atom approach having a wide range of applications Various topics are discussed such as atoms in intense laser fields photon correlations quantum jumps radiative corrections laser cooling and trapping Bose Einstein condensation In this new edition about 200 page of new material has been added

Introduction to General, Organic & Biochemistry Frederick A. Bettelheim, Jerry March, 1991 *The Hydrogen Atom* S.G. Karshenboim, F.S. Pavone, F. Bassani, M. Inguscio, T.W. Hänsch, 2001-06-20 For more than a century studies of atomic hydrogen have been a rich source of scientific discoveries These began with the Balmer series in 1885 and the early quantum theories of the atom and later included the development of QED and the first successful gauge field theory Today hydrogen and its relatives continue to provide new fundamental information as witnessed by the contributions to this book The printed volume contains invited reviews on the spectroscopy of hydrogen muonium positronium few electron ions and exotic atoms together with related topics such as frequency metrology and the determination of fundamental constants The accompanying CD contains in addition to these reviews a further 40 contributed papers also presented at the conference Hydrogen Atom 2 held in summer 2000 Finally to facilitate a historical comparison the CD also contains the proceedings of the first Hydrogen Atom conference of 1988 The book includes a foreword by Norman F Ramsey *NASA Tech Briefs*, 1989-09 *Laser Manipulation of Atoms and Ions* Ennio Arimondo, W.D. Phillips, F. Strumia, 1993-04-08 The recent fascinating progress on laser cooling is the result of the close connection between theoretical work and the rapid technological advances in laser sources particularly in the field of powerful semiconductor and solid state lasers operating over a wide range of optical and near infrared frequencies The very close international and personal collaboration amongst the researchers resulting in a direct link between experimental data and theoretical calculations which characterize work in this field have been important factors in the rapid comprehension of the subtle and beautiful phenomena involved in laser manipulation This Enrico Fermi school is the first formal school fully devoted to this topic The theoretical part of the book includes contributions on the framework for the study of the photon momentum exchanges in the absence of relaxation recent mechanisms of laser cooling an analysis of the cooling forces analysis of atomic and molecular beams cooling through coherent population trapping and the relation between laser cooling and quantum nondemolition measurements The experimental section deals with topics such as an analysis of atomic and molecular beams methods and applications of laser cooling advances in laser cooling and the new exciting field of atomic interferometry All students and researchers working in this field will welcome this excellent review of research and progress in laser cooling so strongly linked to the fundamental understanding of physics
