ENGINEERING MECHANICS STATICS 4E written by authors Andrew Pytel and Jaan Kiusalaas provides readers with a solid understanding of statics without the overload of extraneous detail. The authors use their extensive teaching experience and first hand knowledge to deliver a presentation that is ideally suited to the skills of today's learners. This edition clearly introduces critical concepts using features that connect real problems and examples with the fundamentals of engineering mechanics. Readers learn how to effectively analyze problems before substituting numbers into formulas, a skill that will benefit them tremendously as they encounter real problems that do not always fit into standard formulas. These two books teach students the basic mechanical behaviour of materials at rest (statics) and in motion (dynamics) while developing their mastery of engineering methods of analyzing and solving problems. Traditionally, books for the statics and dynamics courses require students simply to plug problem data into standardized mathematical formulas and then compute an answer without thinking through the problem beforehand. Pytel and Kiusalaas reject this plug-and-chug approach.
