Understanding the Human Factor of the Energy Transition: Mechanisms Underlying Energy-Relevant Decisions and Behaviors Tobias Brosch,David Sander,Martin K. Patel,2016-06-27 An increasing number of countries are shifting toward sustainable energy economies emphasizing the use of renewable energy sources increases in energy efficiency and the abatement of greenhouse gas emissions The success of such an energy transition will depend not only on the development of new energy technologies but also on major changes in the patterns of individual energy related decisions and behaviors resulting in substantial reductions in energy demand Consequently the behavioral sciences can make important contributions to the energy transition by increasing our understanding of the multiple factors and mechanisms that underlie individual as well as group based decisions and behaviors in the energy domain and by creating a basis for systematic interventions that reduce energy usage Many different types of relevant behaviors and decisions need to be considered in this context including decisions to invest in energy efficient household equipment adjustments of energy critical habits related to heating eating or mode of transportation and participation in the political discourse related to questions of energy An integration of the expertise of the different disciplines of the behavioral sciences is thus needed to comprehensively investigate the impact of the different drivers and barriers that may determine energy related decisions and behaviors including economic factors such as price level social factors such as norms communication patterns and social learning processes and individual factors such as values attitudes beliefs heuristics affective biases and emotions The potential impact of these factors on the success of the energy transition is considerable for example a recent projection of the energy demand in Switzerland until 2050 has estimated the reduction potential related to psychological and sociological factors between 0% and 30% depending on which behavioral changes will be implemented in society Increased research

efforts from the behavioral sciences are required to ensure that the full reduction potential can be achieved This Research Topic brings together contributions from different disciplines such as psychology affective science behavioral economics economics sociology consumer behavior business science sociology and political science that improve our understanding of the many factors underlying decision making and behavior in the energy domain and contribute to the development of targeted interventions that aim at reducing energy demand based on these factors Governance, Commissioning and Public Health Linda Marks, 2014-07-23 Drawing on in depth case studies across England this book argues that governance and population health are inextricably linked Using original research it shows how these links can be illustrated at a local level through commissioning practice related to health and wellbeing Exploring the impact of governance on decision making Governance commissioning and public health analyses how principles such as social justice and governance arrangements including standards and targets influence local strategies and priorities for public health investment In developing public health governance as a critical concept the study demonstrates the complexity of the governance landscape for public health and the leadership qualities required to negotiate it This book is essential reading for students academics practitioners and policy makers with an interest in governance and decision making for public health *The Oxford Handbook of Deliberative Democracy* André Bächtiger, John S. Dryzek, Jane Mansbridge, Mark E. Warren, 2018-08-23 Deliberative democracy has been one of the main games in contemporary political theory for two decades growing enormously in size and importance in political science and many other disciplines The Oxford Handbook of Deliberative Democracy takes stock of deliberative democracy as a research field in philosophy in various research programmes in the social sciences and law and in political practice around the globe It provides a concise history of deliberative ideals in political thought and discusses their philosophical origins The Handbook locates deliberation in political systems with different spaces publics and venues including parliaments courts governance networks protests mini publics old and new media and everyday talk It engages with practical applications mapping deliberation as a reform movement and as a device for conflict resolution documenting the practice and study of deliberative democracy around the world and in global governance **Handbook of Big Data** Peter Bühlmann, Petros Drineas, Michael Kane, Mark van der Laan, 2016-02-22 Handbook of Big Data provides a state of the art overview of the analysis of large scale datasets Featuring contributions from well known experts in statistics and computer science this handbook presents a carefully curated collection of techniques from both industry and academia Thus the text instills a working understanding of key statistical The Ethics of Public Health Paternalism T M Wilkinson, 2024-12-30 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read on the Oxford Academic platform and offered as a free PDF download from OUP and selected open access locations The Ethics of Public Health Paternalism is about policies that try to stop people damaging their own health From the point of view of public health advocates if people did not smoke or drank less alcohol or kept off junk food and sugary

liquids they would tend to be healthier Hence such tactics as taxing tobacco restricting the sale of alcohol and limiting the density of fast food outlets Because these tactics appear to limit freedom of choice they are often pejoratively described as the actions of a nanny state that overvalues health and wrongly infringes on the autonomy of adults But many of us want to be healthy rather than ill and alive rather than dead Does a state really nanny us when it uses its power to make us healthier If it does should it stop Some public health policies might reduce inequities of health or save costs in medical treatment or correct market failures But as this book shows lots would not The best case for many public health interventions is paternalistic aiming to steer people away from making unhealthy choices against their own interests But even though it is the best case it often fails It overvalues health and undervalues autonomy It exaggerates the influence of addiction and the marketing of unhealthy products Except for smoking we do not have the evidence needed to show that unhealthy choices are so mistaken as to justify the interventions Much of what modern public health does when it tries to stop adults damaging their health has not been justified The Ethics of Public Health Paternalism applies political and moral philosophy to the ideas of both supporters and critics of public health interventions It uses philosophical analysis of the values of health and well being to explain what sort of evidence is needed to support public health interventions thus exposing a major gap in the arguments of public health advocates and it engages in detail with empirical evidence for instance about smokers regrets
