THE OFFICE: MAGAZINE OF INFORMATION SYSTEMS AND MANAGEMENT ,1989 Integrated Building Intelligence Hamidreza Alavi,Soheila Kookalani,Farzad Rahimian,Núria Forcada,2024-09-01 This book integrates of Building Information Modeling BIM and Decision Support Systems DSS in the field of building design construction and maintenance The book explores how BIM and DSS technologies can be synergistically utilized to enhance performance comfort and maintenance efficiency in buildings With an emphasis on practical applications the book provides a comprehensive overview of the latest advancements in BIM and DSS including real world case studies and implementation guidelines The book features illustrations tables and examples that aid in understanding complex concepts and demonstrate the practical application of BIM and DSS in building projects Readers will gain a deep understanding of how BIM and DSS can be integrated to optimize building design streamline construction processes and improve facility management and maintenance The main benefit of reading this book is that it provides a valuable resource for professionals in the architecture engineering

and construction industries who want to leverage the power of BIM and DSS to enhance their building projects Additionally the book explores how BIM and DSS can contribute to energy efficiency Work, Workflow and Information Systems William B. Rouse, Andrew P. Sage, 2007 This volume brings together several perspectives on the nature of work processes in enterprises and how information systems can best support these processes The genesis of this idea was the shared interests of the authors in how enterprises improve and change The shared belief is that change of enterprises relates to change of work processes and the success of such changes relates to how work processes are supported by information systems Thus the papers in this volume address both the nature of work and the design of information systems to support work This volume is divided into two main sections work and workflow and information systems There are three papers in each section The disciplines represented across these six papers include management engineering computing and architecture These four disciplines pursue work workflow and information systems from quite different perspectives management to represent business practices and processes engineering to represent the physical flows in the system computing to represent the information flows and architecture to represent human flows within and among physical spaces Enterprises of course include all these types of flows **Building Operating Management**, 1997 *A Roadmap for the Uptake of Cyber-Physical Systems for Facilities Management* Matthew Ikuabe, Clinton Aigbavboa, Chimay J Anumba, Ayodeji Oke, 2023-06-22 This is the first book to conceptualise and develop a roadmap for the adoption of cyber physical systems CPS for facilities management FM in developing countries It is argued that effective use of CPS can help to significantly improve issues such as extended processing time poor data acquisition ineffective coverage of facility maintenance history and poor quality control within the facilities management sector Through a theoretical review of relevant technology adoption models and frameworks A Roadmap for the Uptake of Cyber Physical Systems for Facilities Management provides a clear insight into the required parameters for integrating CPS into facilities management The book will be beneficial to relevant stakeholders who face the responsibility of facilities and construction management as it contributes to the growing demand for the adoption of digital technologies in the delivery and management of built infrastructure Furthermore it serves as a solid theoretical base for researchers and academics in the quest to expand the existing borderline on construction digitalisation especially in the post occupancy stage Learning from Our Buildings National Research Council, Board on Infrastructure and the Constructed Environment, Federal Facilities Council, 2002-03-01 In 1986 the FFC requested that the NRC appoint a committee to examine the field and propose ways by which the POE process could be improved to better serve public and private sector organizations The resulting report Post Occupancy Evaluation Practices in the Building Process Opportunities for Improvement proposed a broader view of POEs from being simply the end phase of a building project to being an integral part of the entire building process The authoring committee recommended a series of actions related to policy procedures and innovative technologies and techniques to achieve that broader view In 2000 the FFC funded a second study to look at

the state of the practice of POEs and lessons learned programs among federal agencies and in private public and academic organizations both here and abroad The sponsor agencies specifically wanted to determine whether and how information gathered during POE processes could be used to help inform decisions made in the programming budgeting design construction and operation phases of facility acquisition in a useful and timely way To complete this study the FFC commissioned a set of papers by recognized experts in this field conducted a survey of selected federal agencies with POE programs and held a forum at the National Academy of Sciences on March 13 2001 to address these issues This report is the result of those efforts
