The Muscular System

The main function of the muscular system is movement. This includes walking, breathing, pumping the heart, swallowing food through your digestive tract, just to name a few examples. Without this, we wouldn't be here. Muscles are responsible for movement in nonliving organisms. Without these muscles, we couldn't move, hold up our bodies, or breathe. Muscles are made up of bundles of muscle fibers, which are made up of myofibrils. Myofibrils are made up of actin and myosin filaments, which are responsible for movement. Skeletal Muscles

Approximately 800 skeletal muscles are attached to bones by tendons.

Skeletal muscles contract voluntarily, meaning that you can control them.

Skeletal muscles work against the law of physics, which states that the force of gravity is always acting on them. Skeletal muscles are called striated muscles. Skeletal muscles are attached to the bones at joints. When they contract, they pull the attachments closer to each other.

Tendons are made up of extremely tough collagen fibers in the form of dense regular connective tissue. They attach to skeletal muscle fibers, which are also attached to bones at the other end. Tendons are made up of a dense layer of collagen fibers in the form of dense regular connective tissue. They attach to skeletal muscle fibers, which are also attached to bones at the other end. Cardiac Muscle

Cardiac muscle is only found in the heart and continuously contracts and relaxes to pump blood through the blood vessels of the body. Cardiac muscle contracts involuntarily, meaning that it cannot be controlled by the mind. Cardiac muscle is made up of a dense layer of collagen fibers in the form of dense regular connective tissue.
