Eco-Innovation and Sustainability Management Bart Bossink, 2013-03-05 Sustainability is a phenomenon that must be pursued in a complex system of interrelated elements of business society and ecology It is important to gain an understanding of these elements the interplay between them and the behavior of the system This book explores the business

societal and ecological system in which sustainable innovation has to be envisioned conceptualized realized and improved Author Bart Bossink offers insight into the systematic coherence of drivers of eco innovation and sustainability utilizing a three part approach 1 eco and sustainable innovation in business is based on ideas and people who cooperatively develop these ideas 2 groups of people organized in commercial firms must realize these ideas cooperatively and create the innovations that can conquer the market and 3 that people from governmental non governmental not for profit research and commercial organizations can build institutional arrangements that stimulate these sustainable innovations changing both industry and society Adopting a managerial perspective and discussing concepts and methods to manage eco innovation in business this book highlights the interrelated roles of the individual the firm partnerships and business environments Researchers and practitioners who want to combine a commercial and economical approach with an ethical and social ambition to create an ecologically sustainable firm stand to learn much from these pages Dissecting Characteristics via Machine Learning for Stock Selection David Dümig,2020-01-31 Academic Paper from the year 2019 in the subject Business economics Investment and Finance language English abstract We conduct a comparative analysis of methods in the machine learning repertoire including penalized linear models generalized linear models boosted regression trees random forests and neural networks that investors can deploy to forecast the cross section of stock returns Gaining more widespread use in economics machine learning algorithms have demonstrated the ability to reveal complex nonlinear patterns that are difficult or largely impossible to detect with conventional statistical methods and are often more robust to the effects of multi collinearity among predictors We provide new evidence that machine learning techniques can improve the economic value of cross sectional return forecasts The implications of machine learning for quantitative finance are becoming both increasingly apparent and controversial There is a growing discussion over whether machine learning tools can and should be applied to predict stock returns with greater precision Broadly speaking models that can be used to explain the returns of individual stocks draw on stock and firm characteristics such as the market price of financial instruments and companies accounting data These characteristics can also be used to predict expected returns out of sample **Advocacy Networks and the Responsibility to Protect** Sarka Kolmasova,2023-02-03 This book contributes to existing debates on the Responsibility to Protect R2P by demonstrating new advocacy strategies and the greater interconnectedness of various R2P proponents In 2021 the UN General Assembly adopted a new resolution on R2P which reaffirmed its commitment from the 2005 World Summit Outcome and put R2P on the annual agenda For many R2P proponents this was another manifestation of worldwide R2P relevance and of growing support among UN members to protect people from genocide war crimes ethnic cleansing and crimes against humanity Yet the existing crises in Myanmar Venezuela Belarus Syria and many others revealed the widening gap between the discourse and practice This book aims to find out what keeps the concept alive despite its indisputable pitfalls In contrast to existing studies that treat the R2P endorsement or contestation as intertwined processes of norm

evolution it argues that the status of R2P has been accomplished by the conscious politics of its advocates operating in complex global networks As such the book puts emphasis on the agency of R2P champions and examines who keeps the idea resonating and how they manage to preserve its worldwide relevance Rather than proposing a new model of advocacy the book aims to pinpoint the politics of R2P s circulation the importance of individual R2P champions and their interconnectedness through innovative forms of cooperation within complex networks This book will be of much interest to students of the R2P diplomacy human rights foreign policy and International Relations

The Capacity to Innovate Sarah Giest,2021-04-07 In The Capacity to Innovate Sarah Giest provides insight into the collaborative and absorptive capacities needed to provide public support to local innovation through cluster organizations The book offers a detailed view of the vertical multi level and horizontal dynamics in clusters and cluster policy and addresses how they are managed and supported Using the biotechnology field as an example Giest highlights challenges in the collaborative efforts of public bodies private companies and research institutes to establish a successful ecosystem of innovation in this sector The book argues that cluster policy in collaboration with cluster organizations should focus on absorptive and collaborative capacity elements missing in the cluster context in order to improve performance Currently governments operate at different levels from the local to the supranational in order to support clusters and cluster policies are often pursued alongside other programs leading to uncoordinated efforts and ineffective cluster strategies The Capacity to Innovate advocates for a coordinated effort by government and cluster organizations to support capacity elements lacking within the specific cluster context
