Systematic Transformation Method from UML to Event-B Zou Sheng-Rong, Geng Xue, Yao Ju-Yi, Liu Xiao-Ying, Zhi Yu-Hua, 2024-06-05 Since the emergence of software engineering in the late 1960s requirements analysis has always been an important theme of software development In the process of software development many people are needed to cooperate to ensure the stability and reliability of the software According to the degree of formalization in the software development process software engineering methods can be divided into three types non formal semi formal and formal In object oriented software development UML has become a de facto modeling standard However although UML is intuitive and easy to understand and apply it has inaccurate semantics and UML is a semi formal modeling language that cannot be formally verified Event B is a formal method based on a large number of mathematical predicate logic which is accurate but difficult to understand and apply Therefore how to combine the advantages of UML diagrams and Event B methods is the focus of research

Embedded Linux Development Using Eclipse Doug Abbott, 2008-11-13 The Eclipse environment solves the problem of having to maintain your own Integrated Development Environment (IDE) which is time consuming and costly. Embedded tools can also be easily integrated into Eclipse. The C/C++ CDT is ideal for the embedded community with more than 70% of embedded developers using this language to write embedded code. Eclipse simplifies embedded system development and then eases its integration into larger platforms and frameworks. In this book Doug Abbott examines Eclipse, an IDE which can be vital in saving money and time in the design and development of an embedded system. Eclipse was created by IBM in 2001 and then became an open source project in 2004. Since then it has become the de facto IDE for embedded developers. Virtually all of the major Linux vendors have adopted this platform including MontaVista, LynxWorks, and Wind River. Details the Eclipse Integrated Development Environment (IDE) essential to streamlining your embedded development process. Overview of the latest C/C++ Developer's Toolkit (CDT). Includes case studies of Eclipse use including MontaVista, LynxWorks, and Wind River.

Advances in Computational Science and Engineering Laurence Tianruo Yang, Jong Hyuk Park, Thanos Vasilakos, Yan Zhang, Damien Sauveron, Xingang Wang, Young-Sik Jeong, 2009-11-02 As communication and networking CN become specialized and fragmented it is easy to lose sight that many topics in CN have common threads and because of this advances in one sub discipline may transmit to another The presentation of results between different sub disciplines of CN encourages this interchange for the advancement of CN as a whole Of particular interest is the hybrid approach of combining ideas from one discipline with those of another to achieve a result that is more significant than the sum of the individual parts Through this hybrid philosophy a new or common principle can be discovered which has the propensity to propagate throughout this multifaceted discipline This volume comprises the selection of extended versions of papers that were presented in their shortened form at the 2008 International Conference on Future Generation Communication and Networking <http://www.sersc.org/FGCN2008> International Conference on Bio Science and Bio Technology <http://www.sersc.org/BSBT2008> International Symposium on Ubiquitous Service Science and Technology <http://www.sersc.org/UNESST2008> International Symposium on Database Theory and Application <http://www.sersc.org/DTA2008> International Symposium on Control and Automation <http://www.sersc.org/CA2008> International Symposium on Signal Processing Image Processing and Pattern Recognition <http://www.sersc.org/SIP2008> International Symposium on Grid and Distributed Computing <http://www.sersc.org/GDC2008> International Symposium on Smart Home <http://www.sersc.org/SH2008> and 2009 Advanced Science and Technology <http://www.sersc.org/AST2009>
