Schleiss, 2011-05-10 Labyrinth spillways are almost as old as dam engineering In spite of the fact that they appear as a very good technical economical compromise only 0 1% of large dams are equipped with such weirs The main reason for this is that traditional labyrinth weirs usually cannot be installed on top of concrete gravity dams as they require a large foundat

Labyrinth and Piano Key Weirs III Sébastien Erpicum, Frédéric Laugier, Michel Ho Ta Khanh, Michael Pfister, 2017-04-11 Since the first implementation by Electricit de France on the Goulours dam France in 2006 the Piano Key Weir has become a more and more applied solution to increase the discharge capacity of existing spillways In parallel several new large dam projects have been built with such a flood control structure usually in combination with gates Today more than 25 Piano Key Weirs are in operation or under construction all over the world More than 15 years of research and development have enabled detailed investigations of the hydraulic and structural behaviour of the Piano Key Weir complex structure and have provided more and more accurate design equations Following the proceedings of the first two workshops held in Liege Belgium 2011 and Paris France 2013 Labyrinth and Piano Key Weirs III collects the contributions presented by people with varied background from researchers to practitioners at the 3rd International Workshop on Labyrinth and Piano Key Weirs PKW 2017 22 24 February 2017 Qui Nhon Vietnam The papers reviewed and accepted by an International Scientific Committee summarize the current state of the art on Piano Key Weirs from a theoretical to a practical point of view and present most of the main projects in operation or under construction Labyrinth and Piano Key Weirs III is thus a reference for students practitioners and researchers interested in Dams Engineering

that have often been considered unusual exceptional to the rule and out of the ordinary and therefore not for general study However it is now becoming clear that taken together these phenomena represent a class of regulatory mechanisms that are widespread as well as exceptionally powerful

Water for Food Security Claudia Ringler, Arif Anwar, 2016-03-22 Pakistan's water management is at a critical watershed The world's seventh most populous country faces serious challenges that will require improvements in both the hardware and software of agricultural water management Water shortages are growing rapidly as a result of growing demand across all water using sectors Rapid population growth from 175 million people in 2010 to an estimated 236 million by 2030 and 280 million by 2050 and international food price spikes create pressure to increase agricultural production of staples but demand for cash crops is also growing rapidly including for cotton fruit trees and tobacco to raise rural incomes and generate rural employment to absorb the relatively young rapidly growing rural population Water management is also increasingly affected by climate change including an increased number of flood and drought events and growing energy shortages which affect how water is being sourced and used Last but not least Pakistan's political situation is fragile which has reduced incentives to invest in enhanced agricultural water and other technologies How Pakistan addresses these challenges will be decisive for its population's future water and food security for economic growth and for environmental sustainability It will also affect water and food outcomes globally due to the interconnectedness of global food trade This book was published as a special issue of Water International

Palaeolimnological Proxies as Tools of Environmental Reconstruction in Fresh Water Krisztina Buczkó,János Korponai,Judit Padisák,Scott W. Starratt,2010-05-30 Palaeolimnology is one of the most rapidly developing fields of limnology The primary objective of this volume is to present new palaeolimnological findings from eastern and central Europe Although this area has sometimes received less attention than other areas of Europe the lakes and mires coupled with the variability in landscape and the local differences in climate provide unique opportunity for studying palaeolimnology The volume starts with a review on late Quaternary records from the Carpathian region followed by new results on the history of a crater lake Lake Saint Ana glacial lakes in the Tatra Mountains and Lake Bled in Slovenia In addition the various papers provide new insights on the development of lakes and bogs during the late glacial and Holocene using a wide range of palaeolimnological proxies including diatoms pollen macrofossils pigments cladoceran remains chironomids chaoborids stable isotopes and geochemistry The motivation for collecting recent knowledge derives from the recognition of the importance and applicability of palaeolimnological tools to help in defining reference conditions as designated within the Water Framework Directives and estimating influence of global climate change on surface waters
