When Water Flows Uphill:

Cadillac Desert Marc Reisner, 1993-06-01 I've been thinking a lot about Cadillac Desert in the past few weeks as the rain fell and fell and kept falling over California much of which despite the pouring heavens seems likely to remain in the grip of a severe drought Reisner anticipated this moment He worried that the West's success with irrigation could be a mirage that it took water for granted and didn't appreciate the precariousness of our capacity to control it Farhad Manjoo The New York Times January 20 2023 The definitive work on the West's water crisis Newsweek The story of the American West is the story of a relentless quest for a precious resource water It is a tale of rivers diverted and dammed of political corruption and intrigue of billion dollar battles over water rights of ecological and economic disaster In his landmark book Cadillac Desert Marc Reisner writes of the earliest settlers lured by the promise of paradise and of the ruthless tactics employed by Los Angeles politicians and business interests to ensure the city's growth He documents the bitter rivalry between two government giants the Bureau of Reclamation and the U S Army Corps of Engineers in the competition to transform the West Based on more than a decade of research Cadillac Desert is a stunning expose and a dramatic intriguing history of the creation of an Eden an Eden that may only be a mirage This edition includes a new postscript by Lawrie Mott a former staff scientist at the Natural Resources Defense Council that updates Western water issues over the last two decades including the long term impact of climate change and how the region can prepare for the future

Water Wars Vandana Shiva, 2002 The world's most prominent radical scientist The Guardian Vandana Shiva a world renowned environmentalist and campaigner examines the e water wars of the twenty first century the aggressive privatization by the multinationals of communal water rights While drought and desertification are intensifying around the world corporations are aggressively converting free flowing water into bottled profits The water wars of the twenty first century may match or even surpass the oil wars of the twentieth In Water Wars Privatization Pollution and Profit acclaimed author Vandana Shiva sheds light on the activists who are fighting corporate manoeuvres to convert this life sustaining resource into more gold for the elites In Water Wars Shiva uses her remarkable knowledge of science and society to outline the emergence of corporate culture and the historical erosion of communal water rights Using the international water trade and industrial activities such as damming mining and aquafarming as her lens Shiva exposes the destruction of the earth and the disenfranchisement of the world's poor as they are stripped of rights to a precious common good Shiva calls for a movement to preserve water access for all and offers a blueprint for global resistance based on examples of successful campaigns

Restoring Colorado River Ecosystems Robert W. Adler, 2012-06-22 Over the past century humans have molded the Colorado River to serve their own needs resulting in significant impacts to the river and its ecosystems Today

many scientists public officials and citizens hope to restore some of the lost resources in portions of the river and its surrounding lands Environmental restoration on the scale of the Colorado River basin is immensely challenging in addition to an almost overwhelming array of technical difficulties it is fraught with perplexing questions about the appropriate goals of restoration and the extent to which environmental restoration must be balanced against environmental changes designed to promote and sustain human economic development Restoring Colorado River Ecosystems explores the many questions and challenges surrounding the issue of large scale restoration of the Colorado River basin and of large scale restoration in general Robert W Adler evaluates the relationships among the laws policies and institutions governing use and management of the Colorado River for human benefit and those designed to protect and restore the river and its environment He examines and critiques the often challenging interactions among law science economics and politics within which restoration efforts must operate Ultimately he suggests that a broad concept of restoration is needed to navigate those uncertain waters and to strike an appropriate balance between human and environmental needs While the book is primarily about restoration of Colorado River ecosystems it is also about uncertainty conflict competing values and the nature pace and implications of environmental change It is about our place in the natural environment and whether there are limits to that presence we ought to respect And it is about our responsibility to the ecosystems we live in and use
