

Chapter 11 Section Review Answer Key

Section Review 11-1

1. Mendel's principle of dominance states that some alleles are dominant and others are recessive. 2. A trait controlled by a dominant allele will be produced if there are two dominant alleles present or one dominant allele and one recessive allele. 3. A trait controlled by a recessive allele will be produced only when two recessive alleles are present. 4. Segregation is the process during gamete formation in which the two alleles are separated from each other so that each gamete carries only a single copy of each gene. With the pea plants, each F₁ generation plant produces two types of gametes—for example, those with the allele for tallness and those with the allele for shortness. 5. True-breeding plants allowed Mendel to pinpoint the cause of variation in traits because he could control which plants bred. Without true-breeding plants, Mendel would not have been able to draw his conclusions because there would have been too many variables. 6. Cross-pollination is the process of one plant fertilizing another, while self-pollination occurs when a plant fertilizes itself. 7. 225 plants will show the trait controlled by the recessive allele. 8. The trait controlled by the recessive allele would not have been produced in the resulting F₂ generation. Both F₁ generation plants need to have *rr* allele combination for the trait controlled by the recessive allele to be produced in one of the F₂ generation plants.

Section Review 11-2

1. Probability is the likelihood that a particular event will occur. The principles of probability can be used to predict the outcomes of genetic crosses. 2. Punnett squares are used to predict and compare the genetic variations that will result from a cross. 3. The seed color controlled by the dominant allele has a 50% probability of being produced and the seed color controlled by the recessive allele has a 50% probability of being produced. Students should have 25% and *Rr* in the upper and lower left boxes and 25% and *rr* in the upper and lower right boxes of their Punnett square. 4. Homozygous plants have two identical alleles for a particular trait, *TT* or *rr*. In contrast, heterozygous plants have two different alleles for a particular trait, *Tt*. 5. *Ff* and *FF* are different genotypes, but both combinations will produce the same phenotype, the trait controlled by the dominant *F* allele. 6. *TT* 25% 7. *Tt* 25% 8. *Tt* 25% 9. *rr* 25%

Section Review 11-3

1. segregate 2. multiple alleles, multiple genes 3. b 4. c 5. d 6. a 7. See punnet square 8. In incomplete dominance, the heterozygous phenotype is somewhere in between the two homozygous phenotypes. In codominance, the heterozygous phenotype shows both traits.

9. Polygenic traits have more variation in phenotypes because different combinations of alleles for these genes produce many different phenotypes. 10. Morgan chose fruit flies because fruit flies are easy to keep in the lab and they reproduce quickly, producing a great number of offspring.

Section Review 11-4

1. 7 2. 5 3. 10 4. 1 5. 8 6. 2 7. 6 8. 4 9. 9 10. 3 11. Mitosis produces two cells. Meiosis produces four cells. 12. Cells resulting from mitosis have a diploid number of chromosomes and are genetically identical to each other and to the original parent cell. Cells resulting from meiosis have a haploid number of chromosomes and are genetically different from each other and the original parent cell. 13. Both products of meiosis I and II are haploid cells. Two cells result from meiosis I, and four cells result from meiosis II. 14. Gamete formation in either sex is a result of meiosis. In males, the four cells resulting from meiosis usually all become gametes. In females, however, the cytoplasm is not divided evenly, so that only one of the four cells becomes a gamete. The other cells become polar bodies, which are not used in reproduction. 15. Each daughter cell would contain 14 chromosomes.

Advanced Practice Nursing E-Book Ann B. Hamric, Judith A. Spross, Charlene M. Hanson, 2008-07-02 Covering all advanced practice competencies and roles this book offers strategies for enhancing patient care and legitimizing your role within today's health care system. It covers the history of advanced practice nursing, the theory behind the practice and emerging issues. Offering a comprehensive exploration of advanced practice nursing, this edition also adds a focus on topics including the APN scope of practice, certification and the ethical and legal issues that occur in clinical practice. The development of all major competencies of advanced practice nursing is discussed: direct clinical practice, consultation, coaching, guidance, research, leadership, collaboration and ethical decision making. Advanced practice competencies are discussed in relation to all advanced practice nursing and blended CNS/NP roles: case manager, acute care nurse practitioner, highlighting the shared aims and distinctions of each role. In-depth discussions on educational strategies explain how competencies develop as the nurse's practice progresses. A chapter on research competencies demonstrates how to use evidence-based research in practice and how to promote these research competencies to other APNs. A conceptual framework shows the clear relationship between the competencies, roles and challenges in today's health care environment. Practical strategies are provided for business management, contracting and

marketing Comprehensive information covers the essential competencies of the new Doctor of Nursing Practice degree More exemplars case studies provide real life scenarios showing APN competencies in action A new chapter shows how to provide reliable and valid data to substantiate your impact and justify equitable reimbursement for APN services also enhancing your skills in quality improvement strategies informatics and systems thinking Information on telehealth considerations covers the new sources of electronic healthcare information available to patients and describes how to counsel them on using reliable resources Student Laboratory Manual for Seidel's Guide to Physical Examination - E-Book Jane W. 9780367697570 Applying Molecular and Materials Modeling Phillip R. Westmoreland, Peter A. Kollman, Anne M. Chaka, Peter T. Cummings, Keiji Morokuma, Matthew Neurock, Ellen B. Stechel, Priya Vashishta, 2013-04-17 Computational molecular and materials modeling has emerged to deliver solid technological impacts in the chemical pharmaceutical and materials industries It is not the all predictive science fiction that discouraged early adopters in the 1980s Rather it is proving a valuable aid to designing and developing new products and processes People create not computers and these tools give them qualitative relations and quantitative properties that they need to make creative decisions With detailed analysis and examples from around the world Applying Molecular and Materials Modeling describes the science applications and infrastructures that have proven successful Computational quantum chemistry molecular simulations informatics desktop graphics and high performance computing all play important roles At the same time the best technology requires the right practitioners the right organizational structures and most of all a clearly understood blend of imagination and realism that propels technological advances This book is itself a powerful tool to help scientists engineers and managers understand and take advantage of these advances **AP Music Theory Premium, Fifth Edition: Prep Book with 2 Practice Tests + Comprehensive Review + Online Audio** Barron's Educational Series, Nancy Fuller Scoggin, 2023-07-04 Barron's AP Music Theory Premium Fifth Edition includes in depth content review and practice as well as online audio It is the only book you will need to be prepared for exam day Providing Sound Foundations for Cryptography Oded Goldreich, 2019-09-13 Cryptography is concerned with the construction of schemes that withstand any abuse A cryptographic scheme is constructed so as to maintain a desired functionality even under malicious attempts aimed at making it deviate from its prescribed behavior The design of cryptographic systems must be based on firm foundations whereas ad hoc approaches and heuristics are a very dangerous way to go These foundations were developed mostly in the 1980s in works that are all co authored by Shafi Goldwasser and or Silvio Micali These works have transformed cryptography from an engineering discipline lacking sound theoretical foundations into a scientific field possessing a well founded theory which influences practice as well as contributes to other areas of theoretical computer science This book celebrates these works which were the basis for bestowing the 2012 A M Turing Award upon Shafi Goldwasser and Silvio Micali A significant portion of this book reproduces some of these works and another portion consists of scientific perspectives by some of their former students The highlight of the book is provided by a few chapters that allow the readers to meet Shafi and Silvio in person These include interviews with them their biographies and their Turing Award lectures Modules ,2005
