Fratamico, Chitrita DebRoy, David S. Needleman, 2018-05-02 Pathogenic *Escherichia coli* strains cause a large number of diseases in humans including diarrhea hemorrhagic colitis hemolytic uremic syndrome urinary tract infections and neonatal meningitis while in animals they cause diseases such as calf scours and mastitis in cattle post weaning diarrhea and edema disease in pigs and peritonitis and airsacculitis in chickens The different *E. coli* pathotypes are characterized by the presence of specific sets of virulence related genes Therefore it is not surprising that pathogenic *E. coli* constitutes a genetically heterogeneous family of bacteria and they are continuing to evolve Rapid and accurate molecular methods are critically needed to detect and trace pathogenic *E. coli* in food and animals They are also needed for epidemiological investigations to enhance food safety as well as animal and human health and to minimize the size and geographical extent of outbreaks The serotype of *E. coli* strains has traditionally been determined using antisera raised against the 180 different O somatic and 53 H flagellar antigens However there are many problems associated with serotyping including it is labor intensive and time consuming cross reactivity of the antisera with different serogroups occurs antisera are available only in specialized laboratories and many strains are non typeable Molecular serotyping targeting O group specific genes within the *E. coli* O antigen gene clusters and genes that are involved in encoding for the different flagellar types offers an improved approach for determining the *E. coli* O and H groups Furthermore molecular serotyping can be coupled with determination of specific sets of virulence genes carried by the strain offering the possibility to determine O group pathotype and the pathogenic potential simultaneously Sequencing of the O antigen gene clusters of all of the known O groups of *E. coli* is now complete and the sequences have been deposited in the GenBank database The sequence information has revealed that some *E. coli* serogroups have identical sequences while others have point mutations or insertion sequences and type as different serogroups in serological reactions There are also a number of other ambiguities in serotyping that need to be resolved Furthermore new *E. coli* O groups are being identified Therefore there is an essential need to resolve these issues and to revise the *E. coli* serotype nomenclature based on these findings There are emerging technologies that can potentially be applied for molecular serotyping and detection and characterization of *E. coli* On a related topic the genome sequence of thousands of *E. coli* strains have been deposited in GenBank and this information is revealing unique markers such as CRISPR clustered regularly interspaced short palindromic repeats and virulence gene markers that could be used to identify *E. coli* pathotypes Whole genome sequencing now provides the opportunity to study the role of horizontal gene transfer in the evolution and emergence of pathogenic *E. coli* strains Whole genome sequencing approaches are being investigated for genotyping and outbreak investigation for regulatory and public health needs however there is a need for establishing bioinformatics pipelines able to handle large amounts of data as

we move toward the use of genetic approaches for non culture based detection and characterization of E coli and for outbreak investigations **Airport Services Management** ,1961 *British Medical Journal* ,1913 **Psychological Factors in Physical Education and Sport** Manuel Gómez-López,Marianna Alesi,Carla Maria Chicau Costa Borrego,2022-02-21 **Cumulated Index Medicus** ,1994 *Agrindex* ,1985 **The Changed Life: How COVID-19 Affected People's Psychological Well-Being, Feelings, Thoughts, Behavior, Relations, Language and Communication** Ramona Bongelli,Alessandra Fermani,Daniela Raccanello,Rob Hall,Ilaria Riccioni,Morena Muzi,Roberto Burro,2023-10-30 Covid 19 changed the lives of millions of people around the world The effects of the global pandemic on the physical and psychological health of individuals as well as on their behavioral habits relationships and the way they communicate do not seem to be only short or medium term but on the contrary appear to be long lasting In the same way that it is possible to use the term long covid to refer to the long term effects on the physical health of individuals who have contracted the virus so we think it is possible to use the expression psychological long covid to indicate the long term effects on the psychological health of individuals not only of those who have been infected but more generally of all those who have had to cope with social restrictions lockdowns distancing remote work and learning etc imposed by the pandemic At the same time many people demonstrated resilience as the capacity to cope with adverse events through positive adaptation
