

Holt Chemistry – Guided Notes, Chapter 1: The Science of Chemistry
Section 1: What is Chemistry?

Objectives:

- **Describe** ways in which chemistry is a part of your daily life.
- **Describe** the characteristics of three common states of matter.
- **Describe** physical and chemical changes, and give examples of each.
- **Identify** the reactants and products in a chemical reaction.
- **List** four observations that suggest a chemical change has occurred.

A _____ is any substance that has a definite composition. A _____ is the process by which one or more substances change to produce one or more new substances. The _____ of _____ are the physical forms of matter which are solid, liquid, gas, and plasma.

- _____ have a fixed volume and shape that result from the way their particles are arranged.
- _____ have a fixed volume but not a fixed shape.
- _____ have neither fixed volume nor shape.

Physical changes are changes in which the _____ of a substance doesn't change.

- Changes of state are physical changes.

Chemical changes occur when the _____ of substances change and new substances form.

Evidence of a chemical change:

			
a When acetic acid, in vinegar, and sodium hydrogen carbonate, or baking soda, are mixed, the solution bubbles as carbon dioxide forms.	b When solutions of sodium sulfide and cadmium nitrate are mixed, cadmium sulfide, a solid precipitate, forms.	c When aluminum reacts with iron(III) oxide in the clay pot, energy is released as heat and light.	d When phenolphthalein is added to ammonia dissolved in water, a color change from colorless to pink occurs.

The Jahn-Teller Effect and Vibronic Interactions in Modern Chemistry Isaac Bersuker, 2013-06-29 The first half of the title of this book may delude the uninitiated reader The term Jahn Teller effect taken literally refers to a special effect inherent in particular molecular systems Actually this term implies a new approach to the general problem of correlations between the structure and properties of any molecular polyatomic system including solids Just such a new approach or concept in some sense a new outlook or even a new way of thinking which leads not to one special effect but to a series of different effects and laws is embodied in the many 4000 studies devoted to the investigation and application of the Jahn Teller effect The term vibronic interactions seems to be most appropriate to the new concept and this explains the origin of the second half of the title The primary objective of this book is to present a systematic development of the concept of vibronic interactions and its applications and to illustrate its possibilities and significance in modern chemistry In the first three chapters covering about one third of the book the theoretical background of the vibronic concept and Jahn Teller effect is given The basic ideas are illustrated fully although a comprehensive presentation of the theory with all related mathematical deductions is beyond the scope of this book In the last three chapters the applications of theory to spectroscopy stereochemistry and crystal chemistry reactivity and catalysis are illustrated by a series of effects and laws
