covered with fibres (EFWRC) or solid polymer (ESWRC). Wire rope cores can also be parallel-closed with the outer strands (PWRC), and these parallel-closed ropes are often simply called "double parallel ropes". The different types of steel cores are shown in Fig. 1.29.

In contrast to wire ropes with fibre cores, wire ropes with independent steel cores should only have very slight clearance between the outer strands to prevent lateral strand movements when rope is running over sheaves. After completing a large number of bending tests, Hugo Müller found that the endurance can only be expected to be good if this is the case. The results were published by Greis (1979) as Müller's employer.
