The Wireless World and Radio Review ,1930 **Wireless Communication in Underground Mines** L. K.

Bandyopadhyay, S. K. Chaulya, P. K. Mishra, 2009-08-29 Wireless communication has emerged as an independent discipline in the past decades. Everything from cellular voice telephony to wireless data transmission using wireless sensor networks has profoundly impacted the safety, production and productivity of industries and our lifestyle as well. After a decade of exponential growth, the wireless industry is one of the largest industries in the world. Therefore, it would be an injustice if the wireless communication is not explored for mining industry. Underground mines, which are characterized by their tough working conditions and hazardous environments, require fool proof mine wide communication systems for smooth functioning of mine workings and ensuring better safety. Proper and reliable communication systems not only save the machine breakdown time but also help in immediate passing of messages from the vicinity of underground working area to the surface for day to day normal mining operations as well as for speedy rescue operations in case of disaster. Therefore, a reliable and effective communication system is an essential requisite for safe working and maintaining requisite production and productivity of underground mines. Most of the existing systems generally available in underground mines are based on line wired communication principle; hence these are unable to withstand in the disaster conditions and difficult to deploy in inaccessible places. Therefore, wireless communication is an indispensable, reliable and convenient system and essential in case of day to day normal duty or disaster situations. *The Wireless Age* ,1922 *English Mechanics* ,1929 **Proceedings of**

International Conference on Wireless Communication Hari Vasudevan, Zoran Gajic, Amit A. Deshmukh, 2019-11-16 The book comprises selected papers presented at the International Conference on Wireless Communication ICWiCOM which is organized by D J Sanghvi College of Engineering's Department of Electronics and Telecommunication Engineering. The book focuses on specific topics of wireless communication like signal and image processing applicable to wireless domains, networking, microwave and antenna design and telemedicine systems. Covering three main areas: networking, antenna designs and embedded systems applicable to communication, it is a valuable resource for postgraduate and doctoral students.
