The Neutral Theory of Molecular Evolution Motoo Kimura, 1985-01-10 Motoo Kimura as founder of the neutral theory is uniquely placed to write this book He first proposed the theory in 1968 to explain the unexpectedly high rate of evolutionary change and very large amount of intraspecific variability at the molecular level that had been uncovered by new techniques in molecular biology The theory which asserts that the great majority of

evolutionary changes at the molecular level are caused not by Darwinian selection but by random drift of selectively neutral mutants has caused controversy ever since This book is the first comprehensive treatment of this subject and the author synthesises a wealth of material ranging from a historical perspective through recent molecular discoveries to sophisticated mathematical arguments all presented in a most lucid manner

Understanding Statistics Bruce J. Chalmer, 2020-01-29. Introducing undergraduates to the vital concepts of statistics, this superb textbook allows instructors to include as much or as little mathematical detail as may be suitable for their students. Featuring Statpal statistical software for the IBM PC, the book contains study questions that help solidify students' understanding of the material and prepare them for the next group of concepts. Many of the exercises, labeled Statpal exercises, are especially written for the Statpal statistical package.

Understanding Statistics begins with the basic concepts of statistical inference, presents normal and binomial distributions, general techniques of interval estimation and hypothesis testing, and applications of these techniques to inferences about a single population mean and proportions, and covers inferences about group differences, including parametric and nonparametric approaches to the two-group case and the one-way ANOVA and its nonparametric analogue. In addition, this volume considers relationships between two variables, including the correlation coefficient Spearman's ρ and Kendall's τ , surveys basic regression methods, including simple, multiple, and stepwise, and discusses the analysis of variance of factorial designs, the concept of interaction, and the analysis of categorical data using the chi-square test. Complete with tables and drawings, plus appendices that furnish instructions for using Statpal software, information on advanced topics, and much more, Understanding Statistics is an ideal text for undergraduate survey courses on statistical methods, as well as for courses in economics, psychology, sociology, education, business administration, and others that require basic statistics.

The Population Ecology of Interest Representation Virginia Gray, David Lowery, 1996 This examination of lobbying communities explores how interest group populations are constructed and how they influence politics and public policy By examining how populations of interest groups are comprised this work fills an important gap between existing theories of the origins of individual interest groups and studies of interest group influence The population ecology model of interest communities developed here builds on insights first developed in population biology and later employed by organizational ecologists The model's central premise is that it is the environmental forces confronting interest organizations that most directly shape the contours of interest populations After examining the demography of interest organizations in the fifty American states the population ecology model is used to account for variations in the density and diversity of their interest communities the nature of competition among similar interest organizations to establish viable niches and the impact of alternative configurations of interest communities on the legislative process and the policies it produces These empirical findings suggest that the environment of interest communities is highly constraining limiting their size composition and potential impact on politics Virginia Gray is Professor of Political Science University of Minnesota David Lowery is Burton Craige Professor of Political Science University of North Carolina at Chapel Hill
