Nonlinear Regression Modeling for Engineering Applications R. Russell Rhinehart, 2016-08-01 Since mathematical models express our understanding of how nature behaves we use them to validate our understanding of the fundamentals about systems which could be processes equipment procedures devices or products Also when validated the model is useful for engineering applications related to diagnosis design and optimization First we postulate a mechanism then derive a model grounded in that mechanistic understanding If the model does not fit the data our understanding of the mechanism was wrong or incomplete Patterns in the residuals can guide model improvement Alternately when the model fits the data our understanding is sufficient and confidently functional for engineering applications This book details methods of nonlinear regression computational algorithms model validation interpretation of residuals and useful experimental design The focus is on practical applications with relevant methods supported by fundamental analysis This book will assist either the academic or industrial practitioner to properly classify the system choose between the various available modeling options and regression objectives design experiments to obtain data capturing critical system behaviors fit the model parameters based on that data and statistically characterize the resulting model The author has used the material in the undergraduate unit operations lab course and in advanced control applications

Network Methods for Differential Equations Neha Yadav, Anupam Yadav, Manoj Kumar, 2015-02-26 This book introduces a variety of neural network methods for solving differential equations arising in science and engineering. The emphasis is placed on a deep understanding of the neural network techniques which has been presented in a mostly heuristic and intuitive manner. This approach will enable the reader to understand the working efficiency and shortcomings of each neural network technique for solving differential equations. The objective of this book is to provide the reader with a sound understanding of the foundations of neural networks and a comprehensive introduction to neural network methods for solving differential equations together with recent developments in the techniques and their applications. The book comprises four major sections. Section I consists of a brief overview of differential equations and the relevant physical problems arising in science and engineering. Section II illustrates the history of neural networks starting from their beginnings in the 1940s through to the renewed interest of the 1980s. A general introduction to neural networks and learning technologies is presented in Section III. This section also includes the description of the multilayer perceptron and its learning methods. In Section IV the different neural network methods for solving differential equations are introduced including discussion of the most recent developments in the field. Advanced students and researchers in mathematics, computer science and various disciplines in science and engineering will find this book a valuable reference source.

Deep Learning Neural Networks: Design And Case Studies Daniel Graupe, 2016-07-07 Deep Learning Neural Networks is the fastest growing field in machine learning. It serves as a powerful computational tool for solving prediction, decision, diagnosis, detection and decision problems based on a well defined computational architecture. It has been successfully applied to a broad field of applications ranging from computer security, speech recognition, image and video recognition to industrial fault detection, medical diagnostics and finance. This comprehensive textbook is the first in the new emerging field. Numerous case studies are succinctly demonstrated in the text. It is intended for use as a one semester graduate level university text and as a textbook for research and development establishments in industry, medicine and financial research.

Neural Network Design and the Complexity of Learning J. Stephen Judd,1990 Using the tools of complexity theory Stephen Judd develops a formal description of associative learning in connectionist networks He rigorously exposes the computational difficulties in training neural networks and explores how certain design principles will or will not make the problems easier Judd looks beyond the scope of any one particular learning rule at a level above the details of neurons There he finds new issues that arise when great numbers of neurons are employed and he offers fresh insights into design principles that could guide the construction of artificial and biological neural networks The first part of the book describes the motivations and goals of the study and relates them to current scientific theory It provides an overview of the major ideas formulates the general learning problem with an eye to the computational complexity of the task reviews current theory on learning relates the book s model of learning to other models outside the connectionist paradigm and sets out to examine scale up issues in connectionist learning Later chapters prove the intractability of the general case of memorizing in networks elaborate on implications of this intractability and point out several corollaries applying to various special subcases Judd refines the distinctive characteristics of the difficulties with families of shallow networks addresses concerns about the ability of neural networks to generalize and summarizes the results implications and possible extensions of the work Neural Network Design and the Complexity of Learning is included in the Network Modeling and Connectionism series edited by Jeffrey Elman
