Chapter 1: Introduction

Exercises

1. A physical resource is a physical part of the computer hardware such as a floppy diskette or the CPU. An abstract resource is a conceptual entity that must be obtained before a program can continue execution, e.g. a file descriptor representing a file.
2. The BIOS software provides a library of functions to perform basic input/output operations on the hardware on an IBM PC, including the video output (VGA, SVGA, EGA, etc.), the keyboard, mouse, floppy disk, hard disk, serial ports, parallel ports, or any other peripheral device configured into a system. Without the BIOS functions, the program would have to directly manipulate the hardware registers in a device to check the device status, to perform the operation, and to check the device completion whenever it intended to read or write the device. With the BIOS functions, an operation such as writing a character to a video display can be accomplished with a single BIOS call.
3. Assume the table has n rows and m columns ($0 \leq i < n$, $0 \leq j < m$). Then you could let $k = f(i, j) = i*n+j$ be the linear widget addresses.
4. Private members are only visible to member functions that implement the variable. Other objects can only know about private member data implicitly through the public member functions for the class. The abstraction of the data is the one that the class programmer explicitly provides as public member functions for referencing the private data.
5. Multipart question:
 - a. Subdivision: space-multiplexed
 - b. Personal computer: time-multiplexed
 - c. Whiteboard: time-multiplexed when different classes use the room, but space-multiplexed if two different people are writing
 - d. on different parts of the board.
 - e. Bench seat: space-multiplexed when two people sit on the bench.
 - f. File: time-multiplexed
 - g. Printer: time-multiplexed
 - h. Heap: space-multiplexed when data structure is allocated,
 - i. but time-multiplexed after the memory is released.
6. For a process to execute on the CPU, it must first have its corresponding program and data loaded into the primary memory. Therefore, the amount of primary memory available to be used to store programs and data is one important consideration in
