Introduction

Chapter 1: Introduction to Probability Theory

Chapter 1: Exercises

Exercise 8 (Bonferroni's inequality)

From the inclusion/exclusion identity for two sets we have

$$P(E \cup F) = P(E) + P(F) - P(EF).$$

Since $P(E \cup F) \leq 1$, the above becomes

$$P(E) + P(F) - P(EF) \leq 1.$$

or

$$P(EF) \geq P(E) + P(F) - 1,$$

which is known as Bonferroni's inequality. From the numbers given we find that

$$P(EF) \geq 0.9 + 0.8 - 1 = 0.7.$$

From Geometry to Topology H. Graham Flegg, 2012-03-08 This excellent introduction to topology eases first year math students and general readers into the subject by surveying its concepts in a descriptive and intuitive way attempting to build a bridge from the familiar concepts of geometry to the formalized study of topology The first three chapters focus on congruence classes defined by transformations in real Euclidean space As the number of permitted transformations increases these classes become larger and their common topological properties become intuitively clear Chapters 4-12 give a largely intuitive presentation of selected topics In the remaining five chapters the author moves to a more conventional presentation of continuity sets functions metric spaces and topological spaces Exercises and Problems 101 black and white illustrations 1974 edition

Theoretical Nuclear Physics John Markus Blatt, Victor Frederick Weisskopf, 1991-01-01 A classic work by two leading physicists and scientific educators endures as an uncommonly clear and cogent investigation and correlation of key aspects of theoretical nuclear physics It is probably the most widely adopted book on the subject The authors approach the subject as the theoretical concepts methods and considerations which have been devised in order to interpret the experimental material and to advance our ability to predict and control nuclear phenomena The present volume does not pretend to cover all aspects of theoretical nuclear physics Its coverage is restricted to phenomena involving energies below about 50 MeV a region sometimes called classical nuclear physics Topics include studies of the nucleus nuclear forces nuclear spectroscopy and two three and four body problems as well as explorations of nuclear reactions beta decay and nuclear shell structure The authors have designed the book for the experimental physicist working in nuclear physics or graduate students who have had at least a one term course in quantum mechanics and who know the essential concepts and problems of nuclear physics
