Pardalos, Pierre Hansen, 2008-04-09 Data mining aims at finding interesting useful or profitable information in very large databases The enormous increase in the size of available scientific and commercial databases data avalanche as well as the continuing and exponential growth in performance of present day computers make data mining a very active field In many cases the burgeoning volume of data sets has grown so large that it threatens to overwhelm rather than enlighten scientists Therefore traditional methods are revised and streamlined complemented by many new methods to address challenging new problems Mathematical Programming plays a key role in this endeavor It helps us to formulate precise objectives e g a clustering criterion or a measure of discrimination as well as the constraints imposed on the solution e g find a partition a covering or a hierarchy in clustering It also provides powerful mathematical tools to build highly performing exact or approximate algorithms This book is based on lectures presented at the workshop on Data Mining and Mathematical Programming October 10 13 2006 Montreal and will be a valuable scientific source of information to faculty students and researchers in optimization data analysis and data mining as well as people working in computer science engineering and applied mathematics      **Cahiers** Centre d'études de recherche opérationnelle, 1976      **Mathematical Models for Decision Support** Harvey J.
