**Journal of Object-oriented Programming**, 1998      **Object Oriented Methods for Interoperable Scientific and Engineering Computing** Michael E. Henderson, Christopher Radcliff Anderson, Stephen L. Lyons, 1999-01-01 Contains papers presented at the October 1998 SIAM Workshop on Object Oriented Methods for Interoperable Scientific and Engineering Computing that covered a variety of topics and issues related to designing and implementing computational tools for science and engineering      **A Finite Element Framework for Geotechnical Applications Based on Object-oriented Programming** Peter Fritz, Xiong Zheng, 2002      **ECOOP 2010 -- Object-Oriented Programming** Theo D'Hondt, 2010-06-29 Annotation This book constitutes the refereed proceedings of the 24th European Conference on Object Oriented Programming ECOOP 2010 held in Maribor Slovenia in June 2010 The 24 revised full papers presented together with one extended abstract were carefully reviewed and selected from a total of 108 submissions The papers cover topics such as programming environments and tools theoretical foundations of programming languages formal methods concurrency models in Java empirical methods type systems language design and implementation concurrency abstractions and experiences      **Trees in Algebra and Programming - CAAP '94** Sophie Tison, 1994-03-23 This volume contains the papers selected for presentation at the 19th Colloquium on Trees in Algebra and Programming CAAP 94 which was held jointly with the fifth European Symposium on Programming ESOP 94 in Edinburgh in April 1994 Originally this colloquium series was devoted to the algebraic and combinatorial properties of trees and their role in various fields of computer science Taking into account the evolution of computer science CAAP 94 focuses on logical algebraic and combinatorial properties of discrete structures strings trees graphs etc the topics also include applications to computer science provided that algebraic or syntactic methods are involved The volume contains 21 papers selected from 51 submissions as well as two invited papers

**Theoretical Aspects of Object-oriented Programming** Carl A. Gunter, John C. Mitchell, 1994 Although the theory of object oriented programming languages is far from complete this book brings together the most important contributions to its development to date focusing in particular on how advances in type systems and semantic models can contribute to new language designs The fifteen chapters are divided into five parts Objects and Subtypes Type Inference Coherence Record Calculi and Inheritance The chapters are organized approximately in order of increasing complexity of the programming language constructs they consider beginning with variations on Pascal and Algol like languages developing the theory of illustrative record object models and concluding with research directions for building a more comprehensive theory of object oriented programming languages Part I discusses the similarities and differences between objects and algebraic style abstract data types and the fundamental concept of a subtype Parts II IV are concerned with the record model of object oriented languages Specifically these chapters discuss static and dynamic semantics of languages with simple object models that include a type or class hierarchy but do not explicitly provide what is often called dynamic binding Part V considers

extensions and modifications to record object models moving closer to the full complexity of practical object oriented languages Carl A Gunter is Professor in the Department of Computer and Information Science at the University of Pennsylvania John C Mitchell is Professor in the Department of Computer Science at Stanford University Instructor's Manual with Program Disk [to Accompany] Visual Basic 6: how to Program Harvey M. Langtangen,Are M. Bruaset,Ewald Quak,2012-12-06 To make full use of the ever increasing hardware capabilities of modern com puters it is necessary to speedily enhance the performance and reliability of the software as well and often without having a suitable mathematical theory readily available In the handling of more and more complex real life numerical problems in all sorts of applications a modern object oriented de sign and implementation of software tools has become a crucial component The considerable challenges posed by the demand for efficient object oriented software in all areas of scientific computing make it necessary to exchange ideas and experiences from as many different sources as possible Motivated by the success of the first meeting of this kind in Norway in 1996 we decided to organize another International Workshop on Modern Software Tools for Scientific Computing often referred to as SciTools 98 This workshop took place in Oslo Norway September 14 16

1998 The objective was again to provide an open forum for exchange and discussion of modern state of the art software techniques applied to challenging numerical problems The organization was undertaken jointly by the research institute SINTEF Applied Mathematics The Departments of Mathematics and Informatics at the University of Oslo and the company Numerical Objects AS

*Partiality, Truth and Persistence* Tore Langholm,1988-10-30

In recent years semantical partiality has emerged as an important concept in philosophical logic as well as in the study of natural language semantics Despite the many applications however a number of mathematically intriguing questions associated with this concept have received only very limited attention

Partiality Truth and Persistence is a study in spatial model theory the theory of partially defined models First with the introduction of truth value gaps in semantics there are many ways to generalize the classical truth definition for the sentences of a first order predicate language We know what it means for a sentence to be true or false in a classical complete model but how do we extend this relation when partial models are introduced Various alternatives exist and a detailed comparison is carried out between them Since these studies concern a full first order predicate language many distinctions appear that do not arise in the case of pure propositional logic A condition of monotonicity or persistence of truth relative to partial models has a prominent position among conditions that are not expressible in the framework of standard complete model theory The final chapter investigates the relation between such conditions and expressibility properties in general These discussions culminate with a combined Lindstrom and persistence characterization theorem

Tore Langholm is a research fellow in mathematics at the University of Oslo He is a co author of *Situations Language and Logic*
