Neurotheology Paul F. Kisak, 2016-05-10 Neurotheology also known as spiritual neuroscience attempts to explain religious experience and behaviour in neuroscientific terms It is the study of correlations of neural phenomena with subjective experiences of spirituality and hypothesizes to explain these phenomena This contrasts with the Psychology of religion which studies psychological rather than neural states Proponents of neurotheology say there is a neurological and evolutionary basis for subjective experiences traditionally categorized as spiritual or religious The field has formed the basis of several popular science books but has received criticism from psychologists Neurotheology describes the scientific study of the neural correlates of religious or spiritual beliefs experiences and practices Other researchers prefer to use terms like spiritual neuroscience or neuroscience of religion Researchers in the field attempt to explain the neurological basis for religious experiences such as

- 1 The Near death experience NDE
- 2 Visions Apparitions
- 3 Tunnels of Light
- 4 The perception that time fear or self consciousness have dissolved
- 5 Spiritual awe
- 6 Oneness with the universe
- 7 Ecstatic trance
- 8 Sudden enlightenment
- 9 Altered states of consciousness

This is a relatively new field of neuroscience that seeks to explain the numerous experiences outlined above It has been shown through extensive studies some with the use of the so called God Helmet and new methods of brain imagery that these experiences are normal functions of the brain under relatively extreme circumstances such as stress neurochemical dysfunction surgery mental illness and anoxia

the significance of a self and personality is not fully revealed until it has reached its endpoint but theologically that end point can only occur within the eschatological realm That realm is explored in the book along with implications for personalist theory and ethics Topics covered include the agent intellect dreams and the imagination future orientation and eschatology phenomenology of Time social ethics Love the challenge of AI privacy and solitude and the individual ethic of autarchy This book is an innovative combination of the neuroscientific and theological insights provided by a Personalist viewpoint As such it will be of great interest to scholars of Cognitive Science Theology Religious Studies and the philosophy of the mind

Theology and the Natural Sciences Hans Schwarz,2014-06-18 The emancipation of the natural sciences from religion was a gradual affair during the last four centuries Initially many of the leading scientists were churchmen indicating a symbiosis between faith and reason Due to the increasing specialization in the sciences this close connection came to an end often leading to antagonism and mutual suspicion This book traces this historical development with its twists and turns in both Europe and North America It depicts the major players in this story and outlines their specific contributions The main focus is on the 19th and 20th centuries with figures such as Darwin and Hodge but also Beecher and Abbott in the 19th century In the 20th century the narrative starts with Karl Barth and moves all the way to Hawking and Tipler Special attention is given to representatives from North America Great Britain and Germany In conclusion important issues are presented in the present day dialogue between theology and the natural sciences The issue of design and fine tuning is picked up and advances in brain research Finally technological issues are assessed and the status of medicine as a helpmate for life is discussed An informative and thought provoking book **Neurotheology** Andrew Newberg,2018-03-27 Religion is often

cast in opposition to science Yet both are deeply rooted in the inner workings of the human brain With the advent of the modern cognitive neurosciences the scientific study of religious and spiritual phenomena has become far more sophisticated and wide ranging What might brain scans of people in prayer in meditation or under the influence of psychoactive substances teach us about religious and spiritual beliefs Are religion and spirituality reducible to neurological processes or might there be aspects that at least for now transcend scientific claims In this book Andrew Newberg explores the latest findings of neurotheology the multidisciplinary field linking neuroscience with religious and spiritual phenomena He investigates some of the most controversial and potentially transformative implications of a neurotheological approach for the truth claims of religion and our understanding of minds and brains Newberg leads readers on a tour through key intersections of neuroscience and theology including the potential evolutionary basis of religion the psychology of religion including mental health and brain pathology the neuroscience of myths rituals and mystical experiences how studies of altered states of consciousness shed new light on the mind brain relationship and what neurotheology can tell us about free will When brain science and religious experience are considered together in an integrated approach Newberg shows we might come closer to a fuller understanding of the deepest questions **Cognitive Approaches to Ancient Religious Experience** Esther
