Rubber Technology M. Morton, 2013-04-17 About ten years after the publication of the Second Edition 1973

it became apparent that it was time for an up date of this book This was especially true in this case since the subject matter has traditionally dealt mainly with the structure properties and technology of the various elastomers used in industry and these are bound to undergo significant changes over the period of a decade In revising the contents of this volume it was thought best to keep the original format Hence the first five chapters discuss the same general subject matter as before The chapters dealing with natural rubber and the synthetic elastomers are up dated and an entirely new chapter has been added on the thermoplastic elastomers which have of course grown tremendously in importance Another innovation is the addition of a new chapter Miscellaneous Elastomers to take care of old elastomers e g polysulfides which have decreased some what in importance as well as to introduce some of the newly developed synthetic rubbers which have not yet reached high production levels The editor wishes to express his sincere appreciation to all the contributors without whose close cooperation this task would have been impossible He would especially like to acknowledge the invaluable assistance of Dr Howard Stephens in the planning of this book and for his suggestion of suitable authors

An Evaluation of Asphalt-rubber Mixtures for Use in Pavement Systems Dale S. Decker, 1979 The design and construction of airfield pavements have not been developed sufficiently to provide pavements that will not crack Cracking is a response to traffic and environmental conditions or to the construction material For many years rubber in several different forms has been added to asphalt with limited success in reducing pavement cracking This report reviews the efforts to control cracking by incorporating rubber and asphalt for application as membrane interlayers surface seal coats crack fillers and joint sealers The extensive literature review indicates that conflicting conclusions have been reached regarding varied applications of the asphalt rubber material Of the asphalt rubber products available those with high percentages of rubber 20 to 30 percent by weight appear to be the most promising for airfield pavements although the effectiveness of asphalt rubber in controlling or reducing pavement cracking has not been conclusively demonstrated No superiority of one asphalt rubber product was indicated in the literature Because of the danger of loose aggregate chips the literature indicates that chip seal applications should not be used on facilities where loose chips could be a problem Therefore the membrane interlayer is the only application of asphalt rubber that should be considered for military runways at this time
