The Integumentary System

Integument = Cutaneous Membrane = Skin and associated structures – 3 terms meaning the same thing (glands, hairs, nails)

The integument is considered an organ because it has multiple tissue types that work together to do the functions of the integument.

Functions of the Integument:

- **Protection** - physical barrier
- **Metabolism of Vitamin D (UV)** – epidermis helps make the active form of Vitamin D when UV light is absorbed
- **Waterproofing** – keratin keeping water both in and out
- **Immune Function** – immune cells in the skin perform immune and phagocytic actions
- **Secretion/Absorption** – sebum and sweat secreted, some chemicals and UV radiation absorbed
- **Sensation** – neural endings in the dermis detect stimuli like touch, vibration, temperature
- **Temperature Regulation**
- **Communication**

Components of the Integument

- **Epidermis** – outer layer of integument
 - 4 or 5 distinct component layers
 - Keratinized stratified squamous epithelium
- **Dermis** – inner layer of integument
 - 2 component layers
 - Composed of connective tissue with nervous and smooth muscle tissue within
 - Papillary layer (areolar)
 - Reticular layer (dense irregular connective tissue)
- **Subcutaneous layer (hypodermis)** – not part of the integument, but its function is highly related
 - Areolar tissue
 - Adipose tissue
