Many traditional treatment models then in use were developed primarily to treat alcohol dependence and were proving to be relatively ineffective in treating cocaine and other stimulant dependence. Obert et al 2000. To create effective treatment protocols for clients dependent on stimulant drugs, treatment professionals at the Matrix Institute drew from numerous treatment approaches incorporating into their model methods that were empirically tested and practical. Their treatment model incorporated elements of relapse prevention, cognitive behavioral psychoeducation, and family approaches as well as 12 Step program support.
