ABSTRACT

Varieties of operating systems (OS) have emerged over the years having different features and functionalities. Understanding the functionalities of each OS guides users' decisions about the OS to install on their computers. In view of this, the comparative analysis of different OS is needed to provide details on the similarities and difference in recent types of OS vis-à-vis their strengths and weaknesses. This paper focus on the comparative analysis of Windows, Unix, Linux, Mac, Android and iOS operating systems based on the OS features and their strengths and weaknesses. A qualitative analysis of six different operating systems and result showed that Windows 10 had 0.04 malware file present while Windows 7 machine was 0.08. Higher percentage of mobile malware target Androids than iOS. Windows 10, Linux, UNIX and Mac OS are more secured and reliable. Windows and Android are more popular, user-friendly, easy to use and allow more application program than Mac OS. Linux and Android are free while Windows is moderately costly and Mac OS is very costly. Except for Mac and iOS others allow compatibility. Windows 10 and Mac OS integrated firewall. Windows and Android tend to be the most widely used especially the newest versions. It is because they are affordable, secure, reliable, compatible and user friendly. This study helps to provide some guides to both end-users and developers guiding them in taking decisions about operating systems that are most suitable for them.

1. INTRODUCTION

Operating System (OS) is software that manages and controls the main computer hardware, the hardware peripherals and software resources, so also the users. It also offers the platform and support for application programs and acts as an interface between the computer user, programmers inclusive, and the computer hardware [1]. Applications software like word processors, spreadsheets, databases, and other dedicated applications that businesses need, run on a given OS platform.

Operating systems provide standard services for processes implementation such as storage, deadlock, scheduling and other processes. It also provides a programming environment that enables a user to write and execute programs in a much convenient and efficient way. Every computer system including desktops, laptops, tablets, supercomputers, hand-

held and even video game consoles use some type of operating system. There are numerous types of operating systems in today's ICT world. Mac Operating System designed and owned by Apple Inc., Windows by Microsoft Inc., Linux by Community, likewise Android by Google Inc. and others.

Varieties of Operating Systems have emerged over the years having different features and functionalities. Understanding the functionalities of each OS guides users' decisions about the OS to install on their computers. In view of this the comparative analysis of different OS becomes inevitable. Thus the need arises for a comparative analysis that will give an overview of the similarities and difference in different types of OS with the view to presenting and mapping the features of the OS with various user services.

This paper presents a comparative study of six (i.e. Windows, Linux, Mac, UNIX, Android and iOS) operating systems based on the OS features and their strengths and weaknesses.

The paper is structured as follows: Section 2 presents the review of related works while Section 3 presents the comparative analysis of Windows, UNIX, Linux, Mac, Android, and iOS. Section 4 presents merits and demerits of Windows, UNIX, Linux, Mac, Android, and iOS. Deductions are presented in Section 5 and Conclusion is presented in Section 6.

2. REVIEW OF RELATED WORKS

Several research works had been carried out on operating systems used on desktop computer systems and mobile devices. Summary of the existing works is presented in this section.

Lin and Ye in [2] investigated the smartphone OSs market in a uniform ecosystem framework. They compared major companies like Nokia, RIM, Apple and Microsoft. The result showed that the companies used smartphone OS as a business unit and as opportunity for new business. Similarly in [3], the authors compared various operating systems (OSes) for developing WSN applications such as TinyOS, Contiki, and LiteOS. Several issues were considered amongst which are: memory requirement, process management and scheduling, kernel model, reliability etc. Moreover, features such as Networking Support, Real-Time Guarantee, Language Support, Multi-Threading Support, File System, Platform Support, and Simulator for comparison of these OSes were discussed. Strengths and weaknesses of the operating systems were equally identified. The significance of this work is that, the OS developers will know what had been done on existing OSes, and the OS users will know the various features of
