*The Philosophy of Autism* Jami L. Anderson, Simon Cushing, 2012-11-16 This book examines autism from the tradition of analytic philosophy working from the premise that Autism Spectrum Disorders raise interesting philosophical questions that need to be and can be addressed in a manner that is clear jargon free and accessible The goal of the original essays in this book is to provide a philosophically rich analysis of issues raised by autism and to afford dignity and respect to those impacted by autism by placing it at the center of the discussion

*We've Got Issues* Judith Warner, 2011-02-01 A bold brilliant and provocative look at childhood medication by New York Times bestselling author Judith Warner In *Perfect Madness* Motherhood in the Age of Anxiety the bestselling author and former New York Times columnist Judith Warner explained what's gone wrong with the culture of parenting and her conclusions sparked a national debate on how women and society view motherhood Her new book *We've Got Issues* Children and Parents in the Age of Medication will generate the same kind of controversy as she tackles a subject that's just as contentious and important Are parents and physicians too quick to prescribe medication to control our children's behavior Are we using drugs to excuse inept parents who can't raise their children properly What Warner discovered from the extensive research and interviewing she did for this book is that passion on both sides of the issue is ideological and only tangentially about real children and she cuts through the jargon and hysteria to delve into a topic that for millions of parents

involves one of the most important decisions they'll ever make for their child. Insightful, compelling, and deeply moving. We've Got Issues is for parents, doctors, and teachers, anyone who cares about the welfare of today's children. **The Spiritual**

**Anatomy of Emotion** Michael A. Jawer, 2009-05-21. A cutting edge examination of feelings, not thoughts, as the gateway to understanding consciousness. Contends that emotion is the greatest influence on personality development. Offers a new perspective on immunity, stress, and psychosomatic conditions. Explains how emotion is key to understanding out-of-body experiences, apparitions, and other anomalous perceptions. Contemporary science holds that the brain rules the body and generates all our feelings and perceptions. Michael Jawer and Dr. Marc Micozzi disagree. They contend that it is our feelings that underlie our conscious selves and determine what we think and how we conduct our lives. The less consciousness we have of our emotional being, the more physical disturbances we are likely to have from ailments such as migraines, fibromyalgia, chronic fatigue, and post-traumatic stress, to anomalous perceptions such as apparitions and involuntary out-of-body experiences. Using the latest scientific research on immunity, sensation, stress, cognition, and emotional expression, the authors demonstrate that the way we process our feelings provides a key to who is most likely to experience these phenomena and why. They explain that emotion is a portal into the world of extraordinary perception, and they provide the studies that validate the science behind telepathic dreams, poltergeists, and ESP. **The Spiritual Anatomy of Emotion** challenges the prevailing belief that the brain must necessarily rule the body. Far from being by-products of neurochemistry, the authors show that emotions are the key vehicle by which we can understand ourselves and our interactions with the world around us, as well as our most intriguing and perennially baffling experiences. **Understanding Autism** Chloe Silverman, 2013-09-23.

How the love and labor of parents have changed our understanding of autism. Autism has attracted a great deal of attention in recent years thanks to dramatically increasing rates of diagnosis, extensive organizational mobilization, journalistic coverage, biomedical research, and clinical innovation. **Understanding Autism**, a social history of the expanding diagnostic category of this contested illness, takes a close look at the role of emotion, specifically of parental love, in the intense and passionate work of biomedical communities investigating autism. Chloe Silverman tracks developments in autism theory and practice over the past half century and shows how an understanding of autism has been constituted and stabilized through vital efforts of schools, gene banks, professional associations, government committees, parent networks, and treatment conferences. She examines the love and labor of parents who play a role in developing, in conjunction with medical experts, new forms of treatment and therapy for their children. While biomedical knowledge is dispersed through an emotionally neutral technical language that separates experts from laypeople, parental advocacy and activism call these distinctions into question. Silverman reveals how parental care has been a constant driver in the volatile field of autism research and treatment and has served as an inspiration for scientific change. Recognizing the importance of parental knowledge and observations in treating autism, this book reveals that effective responses to the disorder demonstrate the mutual

interdependence of love and science      Living and Dying in the Contemporary World Veena Das, Clara Han, 2015-11-17  
 Taking a novel approach to the contradictory impulses of violence and care illness and healing this book radically shifts the way we think of the interrelations of institutions and experiences in a globalizing world Living and Dying in the Contemporary World is not just another reader in medical anthropology but a true tour de force a deep exploration of all that makes life unbearable and yet livable through the labor of ordinary people This book comprises forty four chapters by scholars whose ethnographic and historical work is conducted around the globe including South Asia East Asia Latin America Africa the Middle East Europe and the United States Bringing together the work of established scholars with the vibrant voices of younger scholars Living and Dying in the Contemporary World will appeal to anthropologists sociologists health scientists scholars of religion and all who are curious about how to relate to the rapidly changing institutions and experiences in an ever more connected world      Challenging Sociality Kathleen Richardson, 2018-06-30 This book explores the development of humanoid robots for helping children with autism develop social skills based on fieldwork in the UK and the USA Robotic scientists propose that robots can therapeutically help children with autism because there is a special affinity between them and mechanical things This idea is supported by autism experts that claim those with autism have a preference for things over other persons Autism is also seen as a gendered condition with men considered less social and therefore more likely to have the condition The author explores how these experiments in cultivating social skills in children with autism using robots while focused on a unique subsection is the model for a new kind of human thing relationship for wider society across the capitalist world where machines can take on the role of the you in the relational encounter Moreover underscoring this is a form of consciousness that arises out of specific forms of attachment styles      **Autism's False Prophets** Paul A. Offit, 2010-04-02 With a new preface by the author Cover      Far From the Tree Andrew Solomon, 2012-11-13 From the National Book Award winning author of the brave deeply humane open minded critically informed and poetic The New York Times The Noonday Demon comes a book about the consequences of extreme personal and cultural differences between parents and children From the National Book Award winning author of The Noonday Demon An Atlas of Depression comes a monumental new work a decade in the writing about family In Far from the Tree Andrew Solomon tells the stories of parents who not only learn to deal with their exceptional children but also find profound meaning in doing so Solomon's startling proposition is that diversity is what unites us all He writes about families coping with deafness dwarfism Down syndrome autism schizophrenia multiple severe disabilities with children who are prodigies who are conceived in rape who become criminals who are transgender While each of these characteristics is potentially isolating the experience of difference within families is universal as are the triumphs of love Solomon documents in every chapter All parenting turns on a crucial question to what extent parents should accept their children for who they are and to what extent they should help them become their best selves Drawing on forty thousand pages of interview transcripts with more than three hundred families

Solomon mines the eloquence of ordinary people facing extreme challenges Whether considering prenatal screening for genetic disorders cochlear implants for the deaf or gender reassignment surgery for transgender people Solomon narrates a universal struggle toward compassion Many families grow closer through caring for a challenging child most discover supportive communities of others similarly affected some are inspired to become advocates and activists celebrating the very conditions they once feared Woven into their courageous and affirming stories is Solomon s journey to accepting his own identity which culminated in his midlife decision influenced by this research to become a parent Elegantly reported by a spectacularly original thinker Far from the Tree explores themes of generosity acceptance and tolerance all rooted in the insight that love can transcend every prejudice This crucial and revelatory book expands our definition of what it is to be human

**Representing Autism** Stuart Murray,2008-01-01 From concerns about an autism epidemic to the MMR vaccine crisis autism is a source of peculiar fascination in the contemporary media Author Stuart Murray himself the parent of an autistic child contends that for all the coverage autism rarely emerges from the various images we produce of it as a comprehensible way of being in the world instead occupying a succession of narrative spaces as a source of fascination and wonder A refreshing analysis and evaluation of autism within contemporary society and culture Representing Autism establishes the autistic presence as a way by which we might more fully articulate our understanding of those with the condition and what it means to be a human This is an outstanding volume of empathetic scholarship Representing Autism is a truly significant piece of cultural criticism about one of the defining conditions of our time Mark Osteen Loyola College

Autism and Representation Mark Osteen,2010-04-26 This volume the first scholarly book on autism and the humanities brings scholars from several different disciplines together with adults on the autism spectrum to investigate the diverse ways that autism has been represented in novels poems autobiographies films and clinical discourses and to explore the connections and demarcations between autistic and normal creative expression

**A Perfect World** David Cohen,2010-12-01 A father explores his son s autism and delivers a hopeful message A Perfect World is a unique international survey drawing on scores of lengthy interviews conducted over four years as well as being a moving family memoir It offers new insights on the diagnosis of autism intervention therapy research and special needs learning It is a story that will appeal to parents teachers community workers health specialists and fans of travel writing alike With remarkable erudition and literary elegance David Cohen the father of an autistic boy named Eliot has crafted an extraordinary account of autism in his own family and in the world In this engaging and honest book Cohen shows autism in all its vicissitudes in England New Zealand Korea the US and Israel A gifted writer Cohen moves so gracefully across narratives scientific discourses artistic genres historical periods and continents that you hardly notice the full force of his prose until the conclusion when suddenly it hits you Cohen has made us see autism as an essential part of the human condition Professor Roy Richard Grinker author of Unstrange Minds Remapping the World of Autism Professor of Anthropology at George

Washington University USA      Autism and Gender Jordynn Jack, 2014-05-15 The reasons behind the increase in autism diagnoses have become hotly contested in the media as well as within the medical scholarly and autistic communities Jordynn Jack suggests the proliferating number of discussions point to autism as a rhetorical phenomenon that engenders attempts to persuade through arguments appeals to emotions and representational strategies In *Autism and Gender From Refrigerator Mothers to Computer Geeks* Jack focuses on the ways gender influences popular discussion and understanding of autism s causes and effects She identifies gendered theories like the refrigerator mother theory for example which blames emotionally distant mothers for autism and the extreme male brain theory which links autism to the modes of systematic thinking found in male computer geeks Jack s analysis reveals how people employ such highly gendered theories to craft rhetorical narratives around stock characters fix it dads heroic mother warriors rescuing children from autism that advocate for ends beyond the story itself while also allowing the storyteller to gain authority understand the disorder and take part in debates *Autism and Gender* reveals the ways we build narratives around controversial topics while offering new insights into the ways rhetorical inquiry can and does contribute to conversations about gender and disability      **The Autism Matrix** Gil Eyal, 2013-08-26 Today autism has become highly visible Once you begin to look for it you realize it is everywhere Why We all know the answer or think we do there is an autism epidemic And if it is an epidemic then we know what must be done lots of money must be thrown at it detection centers must be established and explanations sought so that the number of new cases can be brought down and the epidemic brought under control But can it really be so simple This major new book offers a very different interpretation The authors argue that the recent rise in autism should be understood an aftershock of the real earthquake which was the deinstitutionalization of mental retardation in the mid 1970s This entailed a radical transformation not only of the institutional matrix for dealing with developmental disorders of childhood but also of the cultural lens through which we view them It opened up a space for viewing and treating childhood disorders as neither mental illness nor mental retardation neither curable nor incurable but somewhere in between The authors show that where deinstitutionalization went the furthest as in Scandinavia UK and the blue states of the US autism rates are also highest Where it was absent or delayed as in France autism rates are low Combining a historical narrative with international comparison *The Autism Matrix* offers a fresh and powerful analysis of a condition that affects many parents and children today
