### The Nervous System

The nervous system is an extremely complex, highly organized, and very sensitive structure that regulates all the functions of the human body. The main purpose of the nervous system is to receive information from the environment and the body, and to coordinate the response. The nervous system is divided into the central nervous system (CNS) and the peripheral nervous system (PNS).

### Central Nervous System

The central nervous system (CNS) is the part of the nervous system that is located in the head and the spinal cord. It is the most complex part of the nervous system. The brain is the most complex part of the CNS, and it is located in the head. The spinal cord is the part of the CNS that is located in the spinal column. The CNS is responsible for all the functions of the body, including the control of movement, sensation, and thought.

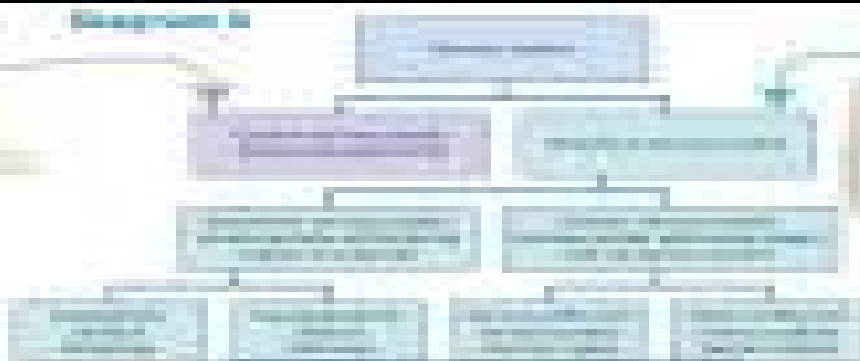

### Peripheral Nervous System

There are all parts of the nervous system that are not part of the CNS, and they make up the peripheral nervous system (PNS). The PNS is made up of all the nerves that are outside the CNS. It is responsible for all the functions of the body, including the control of movement, sensation, and thought.

The PNS is divided into the somatic nervous system and the autonomic nervous system. The somatic nervous system is responsible for all the functions of the body that are under conscious control, such as movement and sensation. The autonomic nervous system is responsible for all the functions of the body that are not under conscious control, such as heart rate and blood pressure. The autonomic nervous system is divided into the sympathetic nervous system and the parasympathetic nervous system.

The brain is divided into the cerebrum, cerebellum, and brainstem. The cerebrum is the largest part of the brain and is responsible for all the functions of the body that are under conscious control. The cerebellum is located at the back of the brain and is responsible for all the functions of the body that are not under conscious control. The brainstem is located in the middle of the brain and is responsible for all the functions of the body that are not under conscious control.
