## THE NATURE OF SCIENCE

- What kind of skills do scientists use?

### 1. Read and complete the statements

#### Different Ways to Learn

Scientists learn about the world around them. They use their **senses**.

Scientists do **experiments** to learn. They carry out experiments again and again to make sure they get the same **results**.

Scientists learn from each other, too. They ask each other, "How do you know?" and share what they learn. They give answers. They tell how they know

experiments    each other    senses

Scientists carry out

Scientists use their

Scientists learn from

### 2. Read and match the questions with their answers

1. Why do scientists repeat their experiments?

2. Why do scientists use their senses?

3. Why do scientists share what they learn?

To help answer each other's questions.

To make sure the results are the same.

To learn about the world around them.

Harvey Brooks Professor of International Science Public Policy and Human Development Harvard University John F Kennedy School of Government It seems self evident that science plays a central role in environmental affairs Regulatory agencies businesses and public interest groups all draw on scientific research to support their claims Some critics however describe science not as the solution to environmental problems but as their source Moreover the science itself is often controversial as debates over global warming and environmental health risks have shown Nature s Experts explores the contributions and challenges presented when scientific authority enters the realm of environmental affairs Stephen Bocking focuses on four major areas of environmental politics the formation of environmental values and attitudes management of natural resources such as forests and fish efforts to address international environmental issues such as climate change and decisions relating to environmental and health risks In each area practical examples and case studies illustrate that science must fulfill two functions if it is to contribute to resolving environmental controversies First science must be relevant and credible and second it must be democratic where everyone has access to the information they need to present and defend their views
