PDN includes many different types of networks like SONET, ISDN, ATM, etc. The connection between these networks might be through leased lines, fiber facilities or wireless radio links. Fig1.6 is the one possible view of the PDN.

Figure 1.6: A depiction of the public data network

PDN can support many different types of service structures including.

1. *Connection oriented services:* They are *Virtual circuits*, *Switched virtual circuits*, *Semi permanent virtual circuits*.
 2. *Connectionless oriented services:* These services are used for data services over network.
- PDN use all the same technologies to construct, owned, and maintained by the user or leased from the service provider.
 - Virtual private data networks Use the public data network, maintaining privacy through the use of a tunneling protocol that effectively conceals the private network data and protocol information by encapsulating it within the public network transmission.
 - Modern cellular telephone systems are currently in an evolutionary upgrade phase in an effort to provide mobile subscribers with high speed connectivity to the PDN.
