Zingoni,2001-03-16 Following on from the International Conference on Structural Engineering Mechanics and Computation held in Cape Town in April 2001 this book contains the Proceedings in two volumes There are over 170 papers written by Authors from around 40 countries worldwide The contributions include 6 Keynote Papers and 12 Special Invited Papers In line with the aims of the SEMC 2001 International Conference and as may be seen from the List of Contents the papers cover a wide range of topics under a variety of themes There is a healthy balance between papers of a theoretical nature concerned with various aspects of structural mechanics and computational issues and those of a more practical nature addressing issues of design safety and construction As the contributions in these

Proceedings show new and more efficient methods of structural analysis and numerical computation are being explored all the time while exciting structural materials such as glass have recently come onto the scene Research interest in the repair and rehabilitation of existing infrastructure continues to grow particularly in Europe and North America while the challenges to protect human life and property against the effects of fire earthquakes and other hazards are being addressed through the development of more appropriate design methods for buildings bridges and other engineering structures **Reinforcement**

Learning with Hybrid Quantum Approximation in the NISQ Context Leonhard Kunczik, 2022-05-31 This book explores the combination of Reinforcement Learning and Quantum Computing in the light of complex attacker defender scenarios Reinforcement Learning has proven its capabilities in different challenging optimization problems and is now an established method in Operations Research However complex attacker defender scenarios have several characteristics that challenge Reinforcement Learning algorithms requiring enormous computational power to obtain the optimal solution The upcoming field of Quantum Computing is a promising path for solving computationally complex problems Therefore this work explores a hybrid quantum approach to policy gradient methods in Reinforcement Learning It proposes a novel quantum REINFORCE algorithm that enhances its classical counterpart by Quantum Variational Circuits The new algorithm is compared to classical algorithms regarding the convergence speed and memory usage on several attacker defender scenarios with increasing complexity In addition to study its applicability on today's NISQ hardware the algorithm is evaluated on IBM's quantum computers which is accompanied by an in depth analysis of the advantages of Quantum Reinforcement Learning
