

Chapter 1

System Description

General Description

The SKYWATCH™ model SKY497 from **BFGoodrich Avionics Systems, Inc.** is an airborne Traffic Advisory System (TAS). It monitors the airspace around your aircraft and advises the flight crew where to look for transponder-equipped aircraft that may pose a collision threat. The SKY497 is intended for use by corporate and general aviation aircraft. **Figure 1-1** shows the major components of the SKY497.

The SKY497 displays traffic information on a BFG WX-1000/SKY497 display and generates aural announcements on the cockpit audio system. The display can be dedicated to the SKY497 or shared with a STORMSCOPE® Weather Mapping System (model WX-1000) using a remote SKYWATCH/STORMSCOPE mode switch.

Traffic information on the CRT display consists of green symbols and text. The traffic information generally includes the relative range, bearing, and altitude of intruder aircraft.

Figure 1-1. SKY497 Major Components

Transmitter Receiver Computer (TRC)

The TRC is the primary unit of the SKY497. It contains the circuitry necessary to convert inputs from the directional antenna and from other aircraft systems into an on-screen representation of intruding aircraft, and if necessary, aural traffic advisories. The TRC can track up to 30 intruder aircraft simultaneously, but to reduce clutter, the SKY497 only displays the eight most threatening intruders being tracked. The TRC also contains Built-In Test Equipment (BITE) which detects faults and verifies proper operation.

Directional Antenna

The directional antenna transmits omnidirectional mode C interrogations and receives directional replies from other transponder-equipped aircraft in the vicinity.
