Troubleshooting LC Systems John W. Dolan, Lloyd R. Snyder, 1989-03-01 Over the last 15 years high performance liquid chromatography LC has made the transition from an instrument used only by experts in research labs to a tool used for routine applications by relatively unskilled workers With this transition have come in instrumentation and column technology In major advances the past the operator had to be a jack of all trades with a screw driver soldering iron and various wrenches as constant companions in the LC lab Today many instruments contain microprocessors as powerful as those of mainframe computers of earlier days With this technology has come a variety of self diagnostic tools that allow the LC system to locate many of its own problems Traditionally well honed LC troubleshooting skills have been a result of years of work at the bench Today the LC system itself often can do a better job of troubleshooting than the operator can Yet many of the problems of the past are still the major problems of today air bubbles check valves detector lamps and of course problems with the separation An added pressure on the operator of today's LC system is that of productivity the lab often cannot afford unnecessary downtime This means that the operator has to be a troubleshooting expert or has to have that expertise at his or her fingertips The present book was written to provide this expertise in an easy to use format for users at all levels of experience
