

Example 1A: Translating a Polynomial Function

For $f(x) = x^3 - 6$, write the rule for each function and sketch its graph.

$$g(x) = f(x) - 2$$

$$g(x) = (x^3 - 6) - 2$$

$$g(x) = x^3 - 8$$

To graph $g(x) = f(x) - 2$, translate the graph of $f(x)$ 2 units down.

This is a vertical translation.

Polynomial Expansions of Analytic Functions Ralph P.Jr. Boas, R.C. Buck, 2012-12-06 This monograph deals with the expansion properties in the complex domain of sets of polynomials which are defined by generating relations It thus represents a synthesis of two branches of analysis which have been developing almost independently On the one hand there has grown up a body of results dealing with the more or less formal properties of sets of polynomials which possess simple generating relations Much of this material is summarized in the Bateman compendia ERDELYI 1J vol III chap 19 and in TRUESDELL 1J On the other hand a problem of fundamental interest in classical analysis is to study the representability of
