

Deadline

Listen for numbers sent in to from the BT master NXT, adding them up and sending back a message telling the BT master NXT (naming "YourMaster") if the total is over or under a set limit. "Deadline" is acting as almost an artificial processing unit here.

Note that while the BT slave NXT is receiving messages over connection #0 (not specified in the BT Receive Message block, as "all" received BT message always come in over this connection), it is also sending messages back to the BT master NXT over connection #0. This means that if multiple slave NXTs are talking back to the one master NXT, all their slave messages will come in to the same connection #0.

REMARK: A slave NXT can "only" send messages out over connection #0, back to the BT master NXT. It also receives BT messages, only from the master NXT, over connection #0 (even though the manually configured connection was named as "connection #1" or something similar from the BT Assistant). Slave can't message slave!

Be one of two things: if the limit was exceeded (the Compare block says not a "True", selecting the upper branch of the Switch), then send the BT text message "over limit" back to the BT master NXT, and reset the running "total" to zero. If the limit has not been exceeded, send the text message "not yet" back to the BT master NXT.
