Tropical Cool: A Buddhist Manual of Air

Conditioning, 2018-02-03 A case can be made and has been made by Pope Francis that the extensive use of air conditioning use in the developed world especially the United States is a careless excess and poor example to the rest of the world Indeed it makes a mockery of the current ideology of energy sustainability including concerns about prevention of global warming Extension of wasteful practices of air conditioning to emerging economies like India is easily shown to be unsustainable As with other recalcitrant problems such as over reliance on cars and poor personal health and dietary habits smoking processed foods the source of the problem is found individual moral choices that are championed as individual freedoms but actually represent a degenerate morality which yields more benefit to corporations and big government than to people The Buddhist ethic provides one path into the heart of human choices illuminating as it does the incorrect thinking that underlies bad choices including those that most people think are based on common sense and scientific expertise This book applies this idea to the matter of air conditioning using Thailand and like Southeast Asian settings as an example It makes the claim that emerging western interest in mindfulness could be leveraged to introduce new thinking on personal energy use that will go much further to create true sustainability than programs based on harnessing geophysical technologies such as solar and wind

Architectural Design Instruments Sébastien Bourbonnais, 2024-07-23 While it is undeniable that architectural practices have been transformed with the advent of digital technologies they nevertheless continue to occupy an ambiguous or even problematic place within the design process The underlying premise of this book on architectural design instruments is not to see them simply as means to an autonomous end one that is pure and detached from any other technological aspect but instead to see these instruments and their formative abilities as a different way in which architects can approach design We maintain that it is through the very act of experimentation with these instruments that their various potentials are revealed and established It is through such repeated experimentation which is constantly being revised and consolidated that practice is successfully and sustainably transformed This view is less of a wish than it is an observation and as such it can be seen in the various practices that are analyzed in this book
