

## Study Guide

### Weathering, Erosion, and Soil Conservation

#### Weathering: The breaking down of rock

##### Mechanical Weathering

*The physical breaking of rock: Does not change the rock*

- Ice Wedging
  - Water seeps into cracks in rock and it freezes, then expands and breaks apart the rock
- Exfoliation
  - Rock expands and contracts from heat and cold and the outer layer "flakes" off.
- Abrasion
  - Sediments from rocks grind against each other (i.e. wind blows sand against rock)
- Animal activity
  - Burrowing animals like moles break up rock
- Plant roots
  - Roots from trees, etc. will break up rock

##### Chemical Weathering

*Rocks are changed  
CHEMICALLY*

- Acid Rain
  - Water drops and carbon dioxide in the atmosphere mix to form carbonic acid.
- Oxidation
  - Air (oxygen) and hydrogen combine – attacking metals, causes rust
- Acids from plants
  - Plants and plant roots can produce acids that dissolve rock.

Factors that affect weathering are the types of rock and the climate.

- The harder the rock the slower it breaks, the colder the climate the slower it weathers.
- *Permeable* rock means that water can pass through it.
- The more surface of the rock that is exposed, the faster it will weather.
- Cold and dry climates: More mechanical weathering
- Warm and wet climates: More chemical weathering

#### Erosion: The MOVING of Rock

After weathering, the process of erosion moves the rock.

- Water
  - Washes rock sediments away
- Wind
  - Blows rock sediments away
- Gravity
  - Pulls rock towards the earth
