Outline

- I. Central Case: Saving the Siberian Tiger**
 - Up until the past 200 years, tigers roamed widely across the Asian continent from Turkey to northeast Russia to Indonesia.
 - Of the tigers that still survive in small pockets of their former range, those in the subspecies known as the Siberian tiger are the largest cats in the world.
 - For thousands of years, the Siberian tiger coexisted with the native people of what is today the Russian Far East, who equated the tiger with royalty and viewed it as a guardian.
 - The Russians who moved into and exerted control over the region in the early to mid-20th century had no cultural traditions that expressed respect for the animal, leading to the decline of the species.
