

## Cycles in Nature Study Guide

Matter moves between the environment and living things in all cycles of matter (water, carbon and nitrogen).

### Water Cycle:

- **Evaporation** is a change of water from liquid to gas.
- **Condensation** is the change of water from gas to liquid.
- **Precipitation** is when water falls back to Earth in the form of rain, snow, sleet or hail.
- Most precipitation that falls to Earth's surface falls directly into oceans.
- Transpiration is when plants release water.
- Groundwater (water under the Earth's surface) is an important part of the water cycle.

- Carbon is important to living things because it transports the material cells use for energy.
- Carbon from the environment becomes a part of living organisms through the process of photosynthesis.
- **Photosynthesis** is when plants use carbon dioxide from the air to make glucose (sugar).
