The Magic of Code Samuel Arbesman,2025-06-10 In the tradition of classics such as The Lives of a Cell a bold reframing of our

relationship with technology that is more positive and human centered In the digital world code is the essential primary building block the equivalent of the cell or DNA in the biological sphere and almost as mysterious Code can create entire worlds real and virtual it allows us to connect instantly to people and places around the globe and it performs tasks that were once only possible in science fiction It is a superpower and not just in a technical sense It is also a gateway to ideas As vividly illustrated by Samuel Arbesman it is the ultimate connector providing new insight and meaning into how everything from language and mythology to biblical texts biology and even our patterns of thought connect with the history and nature of computing While the building block of code can be used for many wondrous things it can also create deeper wedges in our society and be weaponized to cause damage to our planet or our civilization Code and computing are too important to be left to the tech community it is essential that each of us engage with it And we fail to understand it to our detriment By providing us with a framework to think about coding and its effects upon the world and placing the past current and future developments in computing into its broader setting we see how software and computers can work for people as opposed to against our needs With this deeper understanding into the why of coding we can be masters of technology rather than its subjects
