Studies of digital communication technologies often focus on the apparently unique set of multimodal resources afforded to users and the development of innovative linguistic strategies for performing mediatised identities and maintaining online social networks This edited volume interrogates the novelty of such practices by establishing a transhistorical approach to the study of digital communication The transhistorical approach explores language practices as lived experiences grounded in historical contexts and aims to identify those elements of human behaviour that transcend historical boundaries looking beyond specific developments in communication technologies to understand the enduring motivations and social concerns that drive human communication The volume reveals long term patterns in the indexical functions of seemingly innovative written and multimodal resources and the ideologies that underpin them and shows that methods are not necessarily contingent on their datasets historical analytic frameworks can be applied to digital data and newer approaches used to understand historical data These insights present exciting opportunities for English language researchers both historical and modern *Catalog of Copyright Entries. Third Series* Library of Congress. Copyright Office, 1968 Includes Part 1 Number 2 Books and Pamphlets Including Serials and Contributions to Periodicals July December **Studies in Sociology** Various, 2022-07-30 This 9 volume collection originally published between 1969 and 1983 contains a selection of subjects viewed through the perspective of sociology including community the family friendship and kinship leisure women and introductory statistics This set will be a useful resource for those studying sociology as well as of interest for other social science courses *Introducing Social Statistics* Richard Startup, Elwyn T. Whittaker, 2021-10-17 Originally published in 1982 this book describes those basic ideas and techniques of statistics which should be known to every social scientist The explanations are given in careful detail at a level of mathematical sophistication which will be readily attainable by students meeting statistical methods for the first time All the methods described are applied to and sometimes are motivated by genuine problems of interest arising in sociology social policy politics or human geography The authors often provide a meaningful discussion of the substantive problem itself in addition to an analysis of the statistical techniques being used on it In this way subject matter and statistical techniques are integrated in an original and effective manner The authors combine considerable experience of shared teaching of social statistics with familiarity with its use in practical fields and in research Their book therefore focuses on the most directly applicable methods and is carefully sequenced to promote rapid student understanding The topic of probability which so often confuses students is here dealt with simply yet thoroughly The chapter on the sources of social statistics whilst being unusual in a text of this kind is particularly welcome and comprehensively meets the needs of students on a wide range of courses *Introducing Social*
